

Below is a collection of posts that I missed while dumping the NuEnergy and FreeEnergy Yahoo group archives before. Again, some of these are very interesting ones, e.g. Don's fluorescent tube device, being one of his many inventions...

Dennis Lee's OU motor Generator

Don Smith

Here is a recent photograph of a unit that works Correctly.
Notice that the charges do not state that the Unit does not perform.
This is because the Attorney General has knowledge that it does.
The charges by the Kentucky Attorney General are pure Elephant Pooh Bureaucracy.

dave.tingley@juno.com

Don,

looking at the pictures, it looks similar to the device on your website listed as device 20 and 21. Is this because it works on the same principle as yours?

Dave

Don Smith

They do look alike. They are very different in construction and method of function. The motor/generator of Lee requires a 40 Hp electric motor to make go and yields about 180% return. Mine uses a milliwatt motor and each pair of coils gets 1000 Volts at 50 Amperes. Lee's is about 3 feet high and mine is 14 inches. The inventor of the Lee Device lives at Houma, Louisiana. He is an Electrical Engineer with all credentials. My device has 8 set of coils, each set is a separate generator (eight sets). The coil sets come together at a buss bar for a composite output which is regulated by a speed control. Mine is fully self sustainable. Mine runs off of a 12 Volt, 7 1/2 Amp Hr self recharging battery. Lee's starts from a conventional electrical source.

John Homontowski

Don,

Are you a dealer of United Community Services of America. I am. I'm looking at you emails about Genisus too. I need to get more money moving.

Don Smith

John, no am not a dealer. There are a half dozen or so Devices out there that work as stated. I have several of my own which are simpler than the others. I do not sell directly, only through companies that are already long established in a related industry.

Andrew King

Hi Don,

Is your motor on your website? If so, what is the address?

Cheers,

Andy

Don Smith

Go to Lycos search Engine, enter altenergy-pro.com and photos are near the end of the list.

Re: info MAGnetic resonance power system follow uo

Mikael Bi

Dear Mr Smith,

thank you very much for the diagram of the Magnetic power system for water systems following the Houston meeting.

..... [PORTION OF TEXT DELETED].....

Do you have any observation and recomandation to make work this ssytem the most efficiently as possible?

Michel

Don Smith

Mikael please go to <http://www.islandlogix.com/> where You can download a copy of a nonlinear electronic's schematics program with which You can switch and play with componets and see the results on vertial instruments included as a part of the program.

Mikael Bi

It seem to be difficult to create the type of coil in this software, how do you succed to enter the stainless steel core and the special coil in the design?

Michel

Don Smith

Mikael, there are three basic types of devices, inductors, capacitors and resistors. Then there are variations from these. Of the thousands of devices in the software inventory including sold state and other the physical activity is part of the computers knowledge base. Experimentally build several of the specilized cores with the windings and measure the inductance, capacitance and resistance with various windings and frequencies to determine the information which you will add to coil system information upon importing Your Coil system into the software as a new or not previously cataloged component. Hope this helps. Rember the metal core must be high magnetic permeability which always has extream resistance to electrical flow. Remember You are doing the magic on the magnetic side of the equation. Good Luck.

Re: Radiant Enrgy

Mark Ross / Don Smith

very interesting website. Thank You!

Question: What's the point?

The wakening up of persons such as Yourself to the fact that special interest are not doing what's best for humankind.

Question: Do you have anything for sale? If so, what items? And what is the cost of such things and what do they do?

Yes many things for sale, world wide. The examples shown on the web site are more than 10 years out of date. Bad chemistry that exist in the US regarding such resulted in my working from the inside with large multibillion \$ Companies of which I control the majority interest. The technology is being included unannounced in various items in wide distribution presently. One morning when You wake up the World will no longer be the same World You know. Will name only one item and answer Your Question as regards to it ! Light bulbs that cost the same as those already available, which last for more than 20,000 hrs., emit special frequencies not harmful to humans, which destroy all known virus's and include most of the well known incurable's present, such as aids, cancer, hepatitis and many more. The cost is about if not less ordinary light bulbs. More than 5 million of these are already in use. The light bulb is one of several hundred items in progress. For peace of mind, yes I physically have some of the bulbs and they work as stated. Most of the people who have the bulbs are not aware of their true nature.

Hope I answered Your questions? I know this will startle You, but there is no other way.

Robin van Spaandonk

Mild surprise would be nearer the mark. Where can I buy one of these bulbs, and what is the brand name?

Regards,

Robin van Spaandonk

Don Smith

Robin if You can tell me the voltage and cycles per second being used. I will see if My Tokyo Office can arrange some free samples. They will also need a mailing address. If all goes well, mid to late January You will have them.

Have a great day, Don Smith

UPDATE: Motionless Battery Shock Charger

William Alek

Unfortunately, during my tesing of the two output coils shown as the two blue coils this morning, I discovered both coils are electrically shorted to the Metglas c-cores. My FREE ENERGY output is effectively being shunted away! - MAJOR BUMMER!!! I will have cut away the two blue coils, carefully put down a heavy electrically insulating layer, then rewrap my coils. This will cause a 1 week delay! :-(
Bill

Robin van Spaandonk

I thought Metglas was an insulator?
Regards,
Robin van Spaandonk

intalek2001

Those Metglas cores are quite conductive as I found out.
Bill

Robin van Spaandonk

It seems you are correct. I am surprised. I also found this, which I thought you might find useful:
<http://lessemf.com/278.html>
Regards,
Robin van Spaandonk

Don Smith

Robin, you are correct MetGlas is a maximum insulator. I use all the time, you don't have MetGlas.
Happy New Year, Don Smith

The bulbs I presently have are 100 V at 55 cycles for the Tokyo market. Factory puts out one million per month and they sell quickly at equivalent of US \$60. Don't worry, the ones which will be sent to You are free. Supposed to have some which You can use probably mid January.

Don Smith

MetGlas has extreame permeability to the magnetic field, not DC. That's why it's special uses make it attractive. General Electric bought the Patents from Allied-Signal about 2 years ago. They apparently relized that it could change the market as relates to energy. All my MetGlas is prior to GE's takeover. I have copies of the original patents which confirm what I say. The ones on file at the Patent Office probably have been tampered with since GE is one of the Governments Industry Partners who has complete run of all the confidential files, including removing them from the Patent Office and losing them if necessary. I know this happens, I have had the Patent Office do it to me. (see the file listed below, for the material here discussed)

Happy new Year, Don Smith

Honeywell Metglas *(continuation of the above discussion)*

Don Smith

<http://www.elnamagnetics.com/metglas/index.htm>

Intalek2001

Hi Don,

The picture I showed is a Honeywell Metglas c-core:

The part number is AMCC-500.

The outer layer of the core is very conductive, however, between Metglas layers is an insulator. I had weak insulation between the core and the coil, and the coil shorted to the core. I had nearly zero resistance when touching the meter probes between the core and the coil, and a bizarre looking scope trace when measuring across the blue coils.

Both blue coils are now removed and I placed a thick layer of insulation around my core. It will take a few days to hand wind these blue coils again.

Bill

Don Smith

They put a metal band around the core to hold it together, which is not the metglas material. The insulator separator material also makes the core a form of capacitor. Half the energy is usually thrown out as waste which assures under unity. With the ($C = \text{Joules}$) and ($I = \text{Amperes}$) both retained You are on Your way. See <http://www.makisoft.net/quantronix> first paragraph for the formula. The pump speed rate (CPS) then becomes (times spin reversed) becomes very important. That why what You are using makes a great difference.

Re: missing two from the pile *(excerpt from Keelynet)*

Jerry Decker wrote:

Hi Eric et al!

I noticed you DON'T have two others listed;

Don Smith - from Spring, TX (near Houston), claims to have a coil based circuit that he originally claimed tapped into Van Allen belt radiation to generate megawatts of electricity. Sells them for about \$2000, claims big companies all over the world sell them for him, but none in the US or anything that can be tracked...claims he is on the board of big companies everywhere, etc. ad nauseum...

<http://www.altenergy-pro.com/>

photos;

<http://www.altenergy-pro.com/gallery.htm>

contact (photo is about 30 years ago..<g>..);

<http://www.altenergy-pro.com/contact.htm>

Tim Harwood - claims to have duplicated and improved on the Adams motor and discovered his self-named 'Harwood Effect' - Adams will have nothing to do with him...

<http://www.geocities.com/maimariati/>

<http://www.geocities.com/theadamsmotor/>

<http://www.geocities.com/theadamsmotor/motordesign.html>

His goal;

Mission statement for the Adamsmotor Egroup: To become the world's premier forum for building cheap simple over-unity devices that work... and in case you missed it in SciAm, New Scientist, Physica D etc. (what a HOOT!) ;

'This was the first place cheap, simple, off the shelf, cold current plans were first published, and no-one can take that away from me. This website was also the first one to explain time reversal to the general public. I have made my mark on the scientific community, I am happy with that.'

and of course you already have the Bapman....good going...you seem to know about it already but check out <http://www.nuscam.com> for more goodies...

Hi Folks!

In case you haven't seen it spammed over the net, I thought you would get a kick out of just how crazy some of the scamsters are....do you remember smarmy, untrustworthy Dr. Smith on Lost in Space, excellent photo at;

http://www.wallsoffame.com/html/television_89.html

Does it bear similarity to the (very old picture, probably 30 years old and chubbied up) 2000 edition 'Dr.' Smith at;

<http://www.nuscam.com/don1.htm>

so who says Physiognomy is dead?...<g>....

Here is the latest insanity sent to me on Sunday 04/07/02 from 'Dr.' Smith, and my name must be 'Professor' Decker...yeah, thats the ticket!!!!...here in Mexico we call that 'border promotions' where coming across the border TO Mexico you suddenly have all kinds of prestige and credentials where you were a janitor in the states...<g>....haven't joined in that game but its funny to catch people in their own web of lies....like the following craziness.....be sure to HOLD HIM TO IT!!!

from the mind of 'Dr. Smith'....that's about all there is to it, mental...oh, and I cleaned up some of the totally bizarre formatting, I left the spelling and linguistic errors, after all he claims to be a 'Dr.'....and I just HAD to insert comments...

(Response from Don in red and further comments from Decker in black)

Permission to Post and Repost to all discussion Groups.

A RESPONSE TO THE ATTACHED ITEM:

Out of Context information, being incomplete should always be stated, in My Opinion, not as God's word. Casting stones should never become a full time occupation, since nature allows two way trips. This is something that the Middle East and Others have not yet become aware of. Each side assumes they are the

chosen and therefore the stones are allowed only one way trips. Should the stone be returned they become highly agitated.

The single item that defines a criminal mind is their choice between constructive and destructive behavior.

My advise is, unless one knows correctly, what he is talking about, he should always say in My Opinion at let the World judge the appropriateness.

In regards to Jerry Decker's Opinions of Individuals, they frequently are intentional fornication's of a sick mind. This tells Us that Decker has a very low self esteem which requires putting down others as a means of self gratification.

yep, that 'tells US'...nailed it, thank you 'Dr.' Sybil & mental 'friends'....

It is appropriate to lift some one who has stumbled and sit them on track, with a helpful, not malicious intent. Lifting people who do not stumble is folly and can result in a black eye.

"tapped into Van Allen Belt radiation" This is My Beam Energy System which works exactly like the down beaming being done by NASA and Japan. The difference being I use an ionized upward beam which much provides any desired amount of useful electrical energy. It uses the energy gradient going upward towards the Radiation belts.

sure it does, proven worldwide with major news media reports about it...NOT! I love GOOD science fiction...this ain't it.....though it is FICTION...

"Sells them for about \$2000" The answer here is an absolute no! The devices are licensed to large international companies in exchange for between 25 and 50 % of the net income derived from the contract. In order to maintain the license certain requirements, in part being commercial viability must be maintained with minimum periodic income pre stated. Also 50 % of the controlling shares goes into My International Trust.

sure they are, look at the NAMES of all those companies...woops, he FORGOT to name anything that could be CHECKED ON...well fancy that???

The Devices (many) are presently hidden inside other Devices such refrigerators and other appliances, other power Systems which are considered as commonplace. Automobiles are in progress as well as many other items.

WOW, trojan horses in the mind of 'Dr.' Smith and where might anyone BUY or check out ANY of these claims, NOWHERE unless you can trip into the fantasies using some kind of mind link that would work on a shriveled brain, as they have no PROOF of existing in reality...only more bogus claims...

At present time factories which I control are located in Japan, Korea and several large Cities in Mexico. The object is to make My Devices commonplace before most of the World finds that It has been using them all along.

Sure, let me know some of the factories in Mexico, I will most certainly drive over and check them out to report on your claims, but then that will NEVER happen, that you would EVER provide names, dates, places or anything that can be validated and checked out....more BS...

For Your information I have a special light bulb which produces negative ions and uses the Hulda Clark Frequencies. There are many large user's. The largest being Japan. About one million bulbs per month are sold there at the equivalent of \$60. US each. My factory in Korea will top out at about 5 million bulbs per month.

sure you do...and where can ANYONE buy these lightbulbs..oh, no sources?? exactly what frauds do, make claims they cannot and will not support...

Am presently d dealing with the Mexican Government for several factories to be located in the nicer parts of that Country. These bulbs are constructed to last 100,000 hrs each and use 80% less energy.

sure you are, how about some names to verify any of this?? oh, can't provide that anywhere...oh yeah, 'proprietary' great excuse....

Stay out of things of which You have no comprehension and continue that which You do best and the World will be a better place.

as long as 'Dr.' Smith and his cohorts keep making claims that they cannot and will not back up with REAL DEVICES, many of us will be tracking just your scams and reporting them to the wary public, of course there are so many on the net who have either fallen for your lies and not realized they will NEVER see any of your claims come to reality, that can be purchased, tested, verified or otherwise proven....but thats how scam artists work, they puff up people with sensational claims and then sell them bogus plans or a bogus video or 'book'....with hooks in them to sell other items such as Tesla coils, etc...which 'might' help them achieve what the inventor claims, which of course NEVER HAPPENED except in their own feeble and scamming brains...thanks for the information that we can check on in the future...your claims have NEVER been true BEFORE, are not true NOW and will not be true in the FUTURE based on you and your cohorts many, many, MANY past statements, lies & claims that never were and never will be...SCAM ON should be your slogan!

Have a Nice Day, Dr. Smith

Most certainly, thank you, 'Dr.' Smith, I had a very good laugh reading yet another series of hilarious untruths from your senescing brain...you still don't realize how deep you dig yourself in by such ridiculous public claims.....have a wonderful day!

eScribe: KeelyNet: Message: [Keelynet] Re: missing two from the pile

(Don's response to the above comments from Decker sent to NuEnergy group)

Don Smith

Latest in Soap Operas, just like the scandal sheet down at the corner Grocery. Will try to answer some of the questions in Your diatribe. That is if time permits, there were so many. My photo which seems to upset You so much was not 30 years ago, it was about ten years ago when I turned 70. All my health indicators show that there are many years left. I have a male relative that lives at Richardson, Texas who is 105 and just now needs glasses. He gets around like a 50 year old. The Beam Power System which troubles You has no Coils as You suggest. It's extremely simple works exactly as stated. My Business Connections are just that and as such are mostly confidential. Home Depot is one of several Distributors for My products here in the US. I do not deal directly but through the appropriate channels. On the Bulbs, a minimum order is 400,000 units at wholesale \$28. each, paid for by letter of credit up front with delivery in 90 days. We have dozens of such orders in hand at this time. My name does not publicly show up anywhere, with reason, such that troublemakers like Yourself are under control. Factories in Mexico are in Monterey, Guadalajara and northern side of Mexico City. My Patent filings, including WIPO are done at the Monterey Office of "Instituto Mexicano del al Propiedad Industrial" since the US Patent Office is incompetent in such matters relating to My Devices. The NAFTA alliance requires that Patents of each member be honored as their own. With Geneva in pocket and Mexico, then the US has no leg to stand on, or choice in issuing a US Patent. My Japanese and Korean Patents are done at Tokyo. Am out of time so will answer Your other questions later.

Have a Great Day, Dr. Smith

Bruce A. Perreault

Don,

In my opinion it is best that you do not respond to the trash that is written over at the Decker list. He is just trying to draw more attention to himself by degrading others.

Democrat Implies Sept. 11 Administration Plot (washingtonpost.com)

Don Smith

<http://www.washingtonpost.com/wp-dyn/articles/A34565-2002Apr11.html>

Democrat Implies Sept. 11 Administration Plot

By Juliet Eilperin

Washington Post Staff Writer

Friday, April 12, 2002; Page A16

Rep. Cynthia McKinney (D-Ga.) is calling for an investigation into whether President Bush and other government officials had advance notice of terrorist attacks on Sept. 11 but did nothing to prevent them. She added that "persons close to this administration are poised to make huge profits off America's new war."

In a recent interview with a Berkeley, Calif., radio station, McKinney said: "We know there were numerous warnings of the events to come on September 11th. . . . What did this administration know and when did it know it, about the events of September 11th? Who else knew, and why did they not warn the innocent people of New York who were needlessly murdered? . . . What do they have to hide?"

McKinney declined to be interviewed yesterday, but she issued a statement saying: "I am not aware of any evidence showing that President Bush or members of his administration have personally profited from the attacks of 9-11. A complete investigation might reveal that to be the case."

Bush spokesman Scott McLellan dismissed McKinney's comments.

"The American people know the facts, and they dismiss such ludicrous, baseless views," he said. "The fact that she questions the president's legitimacy shows a partisan mind-set beyond all reason."

In the radio conversation, McKinney delivered a stinging attack on the administration. In 2000, she charged, Bush forces "stole from America our most precious right of all, the right to free and fair elections." With the September attacks on the World Trade Center and the Pentagon and in Pennsylvania, McKinney said, "an administration of questionable legitimacy has been given unprecedented power."

She suggested that the administration was serving the interests of a Washington-based investment firm, the Carlyle Group, which employs a number of high-ranking former government officials from both parties. Former president George H.W. Bush -- the current president's father -- is an adviser to the firm. McKinney said the war on terrorism has enriched Carlyle Group investors by enhancing the value of a military contractor partly owned by the firm.

Carlyle Group spokesman Chris Ullman asked: "Did she say these things while standing on a grassy knoll in Roswell, New Mexico?"

During her five terms in office, McKinney has often given voice to radical critiques of U.S. policy, especially in the Middle East. She defied the State Department to investigate assertions that international sanctions are brutalizing innocent Iraqis.

With her comments concerning Sept. 11, McKinney, 47, seems to have tapped into a web of conspiracy theories circulating during the past six months among people who believe that the government is partially -- or entirely -- to blame for last year's attacks, which killed more than 3,000 people.

"What is undeniable is that corporations close to the administration have directly benefited from the increased defense spending arising from the aftermath of September 11th," McKinney charged. "America's credibility, both with the world and with her own people, rests upon securing credible answers to these questions."

None of McKinney's colleagues has embraced her allegations, but a few said they are familiar with the theories.

"I've heard a number of people say it," said Rep. Melvin Watt (D-N.C.), who quickly added, "I can't say that it would be a widely held view" among lawmakers.

Some lawmakers have a less charitable view of McKinney's penchant for publicity. Rep. Johnny Isakson (R-Ga.) said McKinney is simply trying to impress her constituents.

"She's demonstrated at home an ability to win," he said, "and she's demonstrated in Washington a total lack of responsibility in her statements."

Rep. Jack Kingston (R-Ga.), a friend of McKinney's, said the Georgia Democrat is adept at seizing on "red-meat" issues that resonate with her political base and have helped her fend off a series of GOP challengers.

"She's not as random as people think," Kingston said. "People always want to hear a political conspiracy theory."

Staff writer David Von Drehle contributed to this report.

Unfortunately all this is very true. Sandra Levy told two Senators the exact Plan around June, four months prior to 911. In last week of August all (I mean all-all) the details were known inside Washington DC circles including by the President. The whole thing was staged by the Israelis in order to get the US involved in doing their dirty work. The Pilots of the Planes were the only one of their group that actually knew what was going to happen. They were paid by the Israelis. The Israeli News Services were picked up by the New York Police strategically placed and filming the whole thing from the start. They were celebrating as at a football game. To put it bluntly the Bush Family are all, from early CIA days a part of the Gangster Fraternity insider part of the Government. Manipulating History gives them their Kicks. All insider groups do this. In case You did not know Adolph Hitler and Joseph Stalin were both devout Roman Catholics. The Club of Rome decided there were too many people in Europe and WW II was an inside job intended to finish of any other church group that offended the Catholic Hierarchy of which there were several. The Diversity of the World and Roosevelt intentionally letting Pearl Harbor happen upset the Planned Catholicization of the World. It's interesting who decides what goes into the History Books. If You think

the managed and mangled history planted in Schools and Universities is correct, It and everything else, it is heavily edited so only what they want known gets the light of day. By the way, the Bush people helped the Israelis plan the whole thing (911) prior to Levy leaking the information to the Senators who were already a part of the Plot, got her murdered by these same people. I have been a Washington insider since about 1940 so can speak with authority. In case You are wondering, I am a Republican (ex Democrat). (Highly Conservative).

Re: HUBBARD back to life??

miow

dear Mr Don Smith,

Do you really have these coil sets working that well?? Did you research Alfred Hubbard too?

I am astounded - please tell me the latest.

Congratulations

Glenn R

Australia

Don Smith

The Device on My Web Site that is close to Hubbard Device is the one in the 1600's French Hall Chair. It was originally built based on the Tesla Photograph showing one large coil with multiple smaller coils empowered from the flux field of the central coil. As it turns out that is almost exactly what Hubbard's

Device does. The theory about multiple copies from the same flux source without any draw down on the original source allows self sustainable Devices is correct. The magic is in the magnetic waves as a catalyst, result in duplicate copies of energy present. Since electrons present at point A (source) do not travel to point B (duplicate output) additional energy from the ambient background is accessed. This is also the case with conventional magnets and coil systems. All access the Ambient background, which is the source of electrical energy. The Devices do not make the energy, they collect it in all cases. That Milk originates from a bottle mentality of the Physics Community demonstrates their intentional ignorance when understanding energy sources.

Have a Nice Day, Don Smith

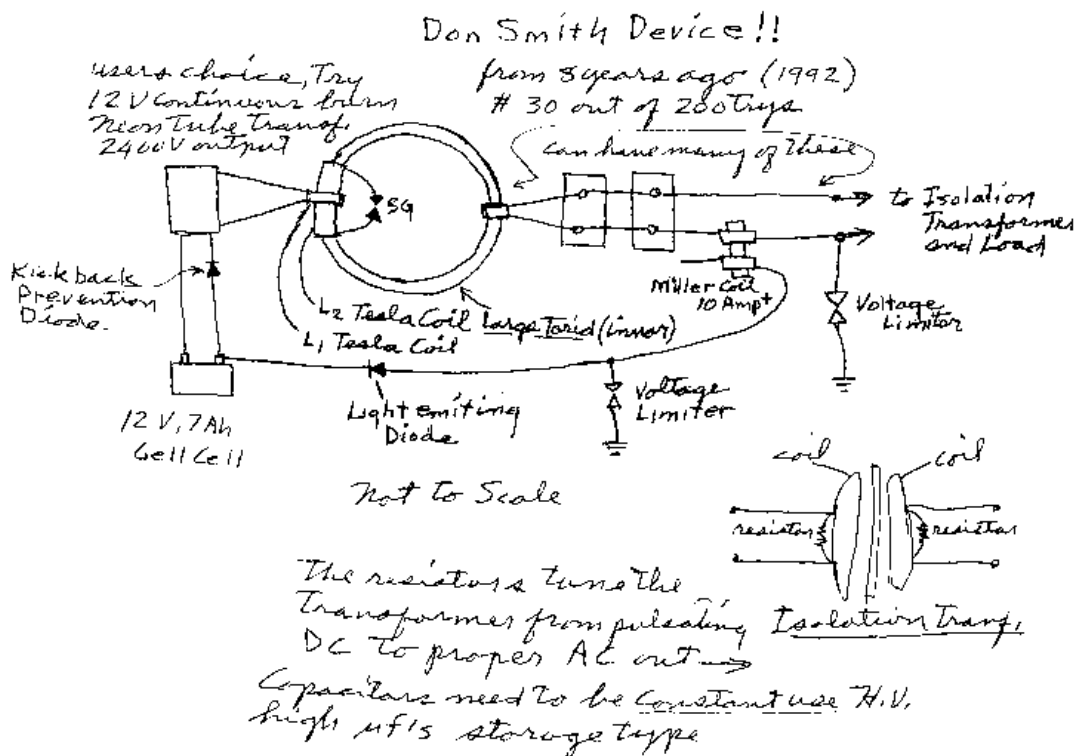

Michel Bisson

Does your toroid coil is made of wiere speaker wire? How is it connect at the end?

Don Smith

Michel this file answers Your Question, it is from My CD "Don's Note Book" which You Have. Heavy speaker wire is choice for coil winding. The statement about 200 try's is just kidding, actually got it right on first try.

Have a Nice Day, Don Smith

Radio Frequency Triggered Nuclear Energy (was Cosmic Ray News)

Robin van Spaandonk

Hi Bruce,

See <http://l2.espacenet.com/dips/viewer?PN=GB763062&CY=gb&LG=en&DB=EPD>

Regards,
Robin van Spaandonk

Bruce A. Perreault

Robin,

Wow! How did you find this jewel? This patent confirms that stable elements can be made to give up their energy by artificially induced decay via radiowaves. This patent is within the range that I have been working in! It adds some credibility to my research.

Many thanks
-Bruce A. Perreault

Robin van Spaandonk

Actually I didn't, someone else found it a few years back, and posted it on one of the lists. I realised how important it was, and added it to my collection of interesting patents. BTW I have attached the html page on which I collect them. Perhaps you will find something else that you don't have yet.

Regards,
Robin van Spaandonk

Norman Bollinger

Wow - this is really cool.

It says you power it for about 30 seconds and it will supply power for 1 hour before another power cycle is needed.

And the material will last for 60 to 70 years.

It will provide 10 amps of 100-110 volts.

It does create radioactive emissions that are contained by the lead shield.

It weighs 25% of known wattage power devices.

Now - what happened to it since 1953-56?

Great find.....
Norman

Don Smith

Here is where a good working knowledge of Chemistry will save Your Life. Two of the elements listed when used together constitute an extremely dangerous explosive device. It would evaporate several square miles with ease. Phosphorus will self ignite in the presence of any oxygen. Cobalt is extremely unstable and requires special handling. It's a practical substitute for uranium in high powered reactions. It's My opinion that the Patent Examiner had no working knowledge of Chemistry. It is also My opinion that when they actually tried to build the device that it exploded and did much damage. If One must build it substitute other elements such as thorium for cobalt and yet to be determined for the phosphorus. I have

a better idea, use a glass tube with gaseous mixture xenon, radon, krypton, users choice. The basic device without the dangerous material mentioned. One of the Devices which I built is a 14" florescent light bulb with a 2 " Diameter by 10" Length B and W coil, 10 TPI, placed over the light bulb and and L-1 of 5 turns centered with a 9000 HV module input to L-1 all ran by a 12 V at 7 Ah Gel Cell Battery. This is a convenient and easy way to get into the gaseous tube electrical generators. A very strong Electrical Dipole Develops which substitutes for a very large battery. The setup requires storage such as capacitors and an inverter to be useful.

Have a Nice Day, Don Smith

Re: [nuenergy] chart

Michel Bisson

<http://myhome.naver.com/terfenol/whatisterfenol.htm>

Don Smith

Michel it looks like You hit pay dirt on magnetostrictive materials. The code numbers on this chart indicate files which show photos and demos and other information used by the University Physics Departments. The part on resonance on this chart relates to My usage.

Take Care, Don Smith

The Tom Bearden Website

Don Smith

This is in part where Some of My Inventions hatched.
It's something very Special and I recommend it Highly.

<http://www.adamtechnology.net/>

Earth's Charge

Bruce A. Perreault

http://www.nuenergy.org/earth_charge.htm

-BAP

donsm1@earthlink.net

Bruce, the general mechanics mentioned in this article are more or less correct. As to lightening one strike is 10 trillion Volts at more than 200,000 amperes and there are more than 20,000 strikes per day world wide. Does that sound like microamps and insignificant amounts of electricity. This electrical process has been going on for more than 4 billion years for the Earth. It's easy to count the strikes since where ever they are they reflect off the ionosphere. The National Weather Center at Denver keeps score on them. The Earth's atmosphere contains enough electrical charge to spin the Earth, exactly as in a large motor. The weight of the Earth is a known, and the rotation rate known. Therefore the energy required for the motor action tells us the active electrical energy present, which is enormous. You can calculate it for Yourself. It's the poney brake approach since You know the force that must be overcome. This is something which I have a very large amount of information and can be rightfully considered authoritative. The people at Lockheed sound like a 6 th grade science class, copying from an outdated Encyclopedia Please put this with the file in question and questions are invited! Robin might like a copy of this.
Have A nice Day, Don Smith

Bruce A. Perreault

Don,

Yes, this is due to accumulated energy in the clouds that is dumped within milliseconds.

Nature shows us just how much energy that can be drawn into our radiant energy receivers with our artificial capacitors. The lightning information is in my book. I will add it to the URL. I would also like to add additional information when time permits.

-Bruce A. Perreault

Ball Lightning

Bruce A. Perreault

<http://www.sciencenews.org/20020209/bob8.asp>

donsm1@earthlink.net

Personal observations on ball lightning during the 1930's might provide some clues. We lived on a farm in north Texas near the Oklahoma border. Summer storms especially at night frequently looked like fourth of July in NY and WWI rolled into one. During day time it's not so highly visible. The ball lightening there was frequently automobile size. It bounced and frequently moved in several directions. It was bright like a welding torch, tinted with blue and yellow. Based on information described in the attached article, I would hazard several guesses. One is that since they don't immediately go only upwards that they are not hot plasma, but negatively charged plasma being cool which being heavier than air keeps them near the surface. The glow cause is similar to that which occurs with fluorescent tubes, bulbs etc. It's probably atomized phosphorus and a lightning bolt that hatched but fizzled.

The particular area in north Texas which I speak of when a display is in progress, several to more than ten Balls going off at a time. This at different times lasted longer than an hour. At first it's very scary, but shortly becomes so fascinating that danger gets lost. Have seen them (smaller ones) pass through the house, bounce off the floor and travel along a display shelf passing through a beautiful lead crystal butter dish, not breaking it but a quarter size clean hole upon entry and one on leaving. I never did time any of them, but it seems forever before some of them flashed out. They also traveled normally several hundred feet to maybe 1/4 of a mile. Also much later when I lived on the east coast of central Africa I got a good look at them a second time. We lived on Victoria Island near Lagos, Nigeria. Frequently at night time high wind and blow in, could set You clock by their arrival, mostly 1:30 AM. The electrical wiring in the houses was 240 V and finger sized wires. The storming coming from the ocean was related to Daytime and Nighttime temperature changes, although only a couple of degrees. Anyhow with storm in progress, all of the plug boxes throughout the house spued ball lightning which was like a pool game gone mad. Did not dare to get out of bed, just watch in horror till it would go away. Needless to say our small dog would have a mental breakdown. They would cross the marble floors some times 3 or more times before going out. Was also an engineer for an Atomic Energy Project, immediately next door to Area 51 during the time that Lazar was doing his thing. During snow storms there was a lot of lightning and ball lightning. In this case light coming through snow filled air changes colors, all colors of the rainbow from one flash, with many at varying distances going on at the same time. It's a real psychedelic experience. There are a lot of other experiences including ball lightning inside a TWA Jet around the World flight when landing at Heathrow Airport at London. Enough boring news !

Take Care, Dr. Smith

What are EMFs?

Don Smith

<http://infoventures.com/private/federal/q&a/qa-intr5.html>

Doesn't the earth produce EMFs?

Don Smith

<http://www.infoventures.com/private/federal/Q&A/qa-intr7.html>

This is not lightning or other induced sources present. It's the add on found naturally. It increases upward from the surface. The static potential is in the Billions of Volts. lightning is only a small part of this.

Cool Experiments with Magnets

Don Smith's Rotating Separator Coil

Bruce A. Perreault

Hello All!

Check out Don Smith's Rotating Separator Coil graphic that he just sent to me...

<http://ionvalve.com/iw/2002/smith.htm>

Click on the small graphic ion to see the full graphic view. This is how Don's eight coil device works that is shown on his website.

-Bruce A. Perreault

gldseason

May be this will work, I tried it with the powdered Magnesium and Bisimuth,,,,,and not a flicker. So 316 SS may just work for the wheel.....Gary

donsm1@earthlink.net

Try several thin layers of magnetostictive material alternating with thin layers of electrically conductive material. For example stainless steel and copper and or aluminum. This is not yet an exact science and requires a skill level. You may get some weird results at first. It requires mixing electrically conductive with none conductive which scatters-disorganizes the magnetic waves.

Dr. Smith

Communication with Don Smith

Don Tauer

Bruce and everybody,

Like many of you, I have met Don Smith. I have read his web site with great interest. The devices he has shown show the careful construction of a professional engineer and I believe they work as he has stated. If the devices do work, shouldn't we expect some sort of attempt to discredit him a la Joe Newman? His devices represent the potential to cost the power people many millions. People have been murdered for a lot less. Remember Karen Silkwood? Let us be cautious and not contribute to any harm that may come to Don, while at the same time bein careful for ourselves.

Don Tauer

Bruce A. Perreault

Don,

I spoke with Don Smith tonight on the phone. He has assured me that everything is running on schedule and everything is on the up and up. He has also informed me that someone is telling me a bunch of lies. Don sent this

statement in an email after he got off the phone with me...

"My new Office is funded by private funds, mine and a friend and there is no possibility of any screw up of any kind. The Office is a Research and Development Facility and no Sales of any kind are done. Products Developed are manufactured in Taiwan, South Korea and Mexico. The Market is captive and requires no selling. All products already have owners at the time they come off the assembly line." _Don Smith

I will give him the benefit of the doubt and see what he brings to inventor's weekend this October.

-Bruce A. Perreault

Whizard

Bruce, This was exactly my feeling - the debunkers, troublemakers and propaganda pros may be on the attack. When they see a threat to the status quo (existing energy cartel) they start with a well planned campaign of propaganda, lies and setups to wreak havoc.

It Appears that Someone is Impersonating me on the Discussion lists

Bruce A. Perreault

To All This May Concern!

I just got a phone call from Don Smith. He tells me that someone is mass mailing posts to the discussion groups that is making me look bad. These posts are appearing to be coming from me! These posts contain attacks made against Don. Answer this question... why with Inventor's Weekend coming up soon would I degrade one of our key speakers? All I can say is that someone is up to their old dirty tricks again. Don is doing well and is making good progress with his work. He has a lot to offer to our elite field at Inventor's Weekend this year. If something doesn't appear to be on the up and up from one of my posts please send me an e-mail right away and I will confirm what was said if it is true or not. If the post is not from me I will try to post a counter response immediately.

Sincerely, Bruce A. Perreault

Banning people from Inventor's Weekend

Bruce A. Perreault

Hello All!

I would like to briefly respond to this recent post without taking up too much of anyone's time. It is only fair that I get to respond to this...

<http://www.escribe.com/science/keelynet/m13434.html>

For the record... I have not banned anyone from Inventor's Weekend which is a semi-private event this year. I do have the right to impose some restrictions on people who have a strong inclination to disrupt the event.

A person who I will not name has donated \$150 for two registrations to Inventor's Weekend. Yes, it is a donation to attend our event. There are always people who don't give a donation because they don't have too much money to live on. No one is turned down attendance because they can't afford a donation. Inventor's Weekend is not a

commercial event. It is a time of year for inventor's to join hands for growth and development. It is a time of fellowship for us inventors and innovators. Getting back to the focus of this post... I asked this person the name of the person who would be attending with them so that I could make a name tag for them. I was informed that I knew this person as "Mr. Jones" from last years event. That, his real name is Monroe Fischer. This immediately sent up a red flag. This is because last year Monroe Fischer, one of Jerry Decker's "remote viewers," attended Inventor's weekend, and then later filed a negative report on our event that was far removed from the truth. I wrote back to the person who gave the donation and told them that if Monroe Fischer is going to attend that he is to follow some basic rules of ethics. He must use his real name because using a false name is dishonest in my judgement. I stated that I wanted Monroe Fischer to give me a phone call so I could discuss with him about his attendance. I stated that I did not want him to say anything that would be hurtful to another person at our gathering. Even though I knew that this person was attending just to find some dirt for Jerry I was willing to go over some ground rules that would allow him to test the hardware that is being presented this year. Last year he brought a cheap DVM that what would have fried it if he used it to meter the high voltage, high frequency that was coming off from one of Don Smith's devices. He was not prepared to do any type of accurate testing. Monroe Fischer has not called me... instead I see a post over the Keely list and simultaneously over at the Harlan Sander's website that is libelous to my name.

Monroe Fischer's name does not appear on the Inventor's Weekend report that is posted at the Harlan website. Instead "Mr. X" was given credit for the report on the Harlan Sander's website. The author of this website stated that they wanted the true identity of this person. You be the judge if this is to be believed or not. Coming to the defense of Inventor's Weekend... our event was very successful and it was like everyone was a family. It was a total success. Just ask Steve Mills who is supposed to have "finally seen the light," according to a post over at the Sanser's website. Come to Inventor's Weekend and he will tell you how this site has twisted his words. The report that has been posted is a fabrication to make me look bad. Yes, I did edit one tape, it was about five minutes of Don Smith's presentation because Monroe Fischer got up and confused Mr. Smith and made him look like an idiot. This was uncalled for. Everyone at this event knew that Don had suffered from a severe stroke, he had to wipe drel off from his mouth because of his loss of some facial control. If you hit him too fast with questions he gets confused. Monroe Fischer unfairly took advantage of Don's disabilities. This is why I deleted about five minutes from Don's video. What was done was very unethical in my opinion and very hurtful to Don who took his time to share his work with his fellow inventor's.

There will be no camcorders allowed at Inventor's Weekend. However, I will be sending digitally taped presentations to a person who is willing to put them up on his server in their entirety, uncut, free of charge.

Enough time wasted... hopefully, I have made my case. If you come to our gathering this year you can ask anyone there who attended last years event who's side of the story is correct.

Sincerely, Bruce A. Perreault

Don Smith's Inventor's Weekend Presentaion & Deadline *(Sep 28, 2002)*

Bruce A. Perreault

Hello All!

Don Smith called me on the telephone today to tell me that he will be releasing information at Inventor's Weekend this year that was proprietary information up until just recently. He has informed me that he is doing this now because his patents in Mexico have been approved. Don also tells me that he will be bringing along some good test equipment to validate his claims.

I need to remind everyone that the deadline for Inventor's Weekend is only days away... October 4th, 2002 is the cut-off date.

Best Regards, Bruce A. Perreault

Don Smith's Health

Bruce A. Perreault

Hello All!

Those of us who attended Inventor's Weekend were sadly disappointed that Don Smith could not give his presentation. Don should have been able to attend as he had his surgery to unblock some arteries on one side of his head. However, I found out today that Don had another stroke shortly after his surgery that has given him a speech impairment. Don was released from the hospital a few days back and he is eating and can walk, but his speech is not too good. He will be going to therapy for that for a while. It is almost impossible to hear him because he now talks in gasps. He said he has no control over his right arm and had to take a breath of air between words, but his thinking appears to be very clear. He wanted to apologize to everyone for not being able to be at the conference.

Our prayers go out to Don and his family.

-Bruce A. Perreault

Norman Bollinger

I am very concerned about what Don Smith seems to have done - considering his current health crisis. I don't want to see another Tesla type loss to all of us. Is anyone in the Texas area where he lives? - that has access to him. Has anyone on this list seen what he is doing?

I understand from discussions at the inventor's weekend conference that

1. he has working devices around the world.
2. he has a Mexican patent -

How do we get access to that patent?

3. Don has two publications that I am aware of.
 - a. Magnetic Resonance Energy systems (40,000 copies worldwide)
 - b. Earth Electrical System II - Information and Concept

Have you read/have access to these documents.

Are they online somewhere?

They are not copyrighted to my knowledge.

Lets get a good discussion going on this issue.

Norman

Bruce A. Perreault

Norman,

Don's patent has been filed but it has not yet been granted. Don is still on our list. Maybe he will respond if he still can use one of his hands to type. His mind is still sharp.

-BAP

PLASMA ENERGY

Donald L. Smith

Have been flowing the Babel on Plasma and among the knit pickers not one has mentioned how to access this energy. Obviously someone needs to point the way. The PLASMA forms a very strong - and large MAGNETIC DIPOLE . The right angle component of this DIPOLE converts to useful energy . In conventual's power generation this thrown away. There many thousands of times the energy present by conventual's methods. HAVE A NICE DAY, DON SMITH

Bruce A. Perreault

Don,

It is great to have you back!

-Bruce

Whizard

Hi Don, Great to see you back!

nuenergy_scientist

Don,

That "someone" is us. We really need to shake the basket and let the bad apples fall out.

-Bruce

Back to measurements ! COP 1.25 ???

Stefan Hartmann

Hi All,

I found today in my cellar my old letter scale, which is unfortunately not very precise, but for a quick try while waiting for the digital scale to arrive, I tried an experiment with it.

I used this time 2 stainless steel meshes in a 2 ccl glass and put just tap water in there. Then I connected these 2 steel meshes to my 230 Volts AC 50 Hz grid.

I just wanted to see, if normal household things could be used and not needing to buy tungsten rods.

So I started the heating up and when the water boiled I made readings of my apartment housewattmeter and of the grams on the scale.

I then boiled off 20 grams of water and after this I took a note again of the used up KWHs of my house wattmeter.

Here are the numbers:

20 grams boiled off= 45200 Joules

used KWHs: 0.01 KWH = 36000 Joules.

This gives off an efficiency of : COP= 1.2555

Well, as I am in the very low KWHs of my meter and thus probably far away in the error range and also the scale has only a resolution of 10 grams for each point on it, I don't give these readings not much trust... It could also have been COP= 0.75. But who knows. I still have to wait for my measurement equipment to arrive and then I will repeat these experiments with better measurement resolutions, but it seems, also AC and normal household stainless steel mesh can be used as the electrodes ! It seems, one basic effect is just the boiling by current flow in water.

What there happens at the electrodes only chemical analyzes can find out.

So much for today.

Regards, Stefan.

Donald L. Smith

Stefan, check your magnetometer for wasted energy being greater than 90% . Have a Nice Day, Don Smith

free energy source

Norman Bollinger

Take the blade off your lawn mower and start it up and see what it does. It stalls out. It needs the momentum to keep it going at low speeds on to the next compression and fire cycle. Its probably not as critical on a 2 cycle engine but a 4 cycle engine has double the problem that a 2 cycle

donsm1us

Norman , when the forces are balanced as in Henry Ford,s Device it becomes self propelled . A lawn mower will do the same . Dieseling by diesel engines is a mechance form of this . Bedeni knows this . The moderator has deleted me from the free-energy group .

Regards , Don Smith

Taking Secrets to The Grave ?

Donald Smith

Kevin , You have a good chemistry , that will help a lot in Your Journey through life . To cheer You up a we bit , I have a free set of My CD'S for You . Will need Your mailing address . One of the CD's has several Nice Spice programs [Don's Notes .] In the Internet go to [Visual Spice at Island Logic] , is has Multi Meter and Oscilloscope Simulators Built in . It also has a component editor where You can add new components . I recommend this program highly . Students sometimes get free copies . Otherwise they cost 3,000. \$,s and upwards.

Have a nice day , Don Smith

Re: Problems reading the CD

Warren Opheim

Dear Mr. Smith:

At the conference in Houston I gave u a ck for \$60 for a book & CD. The ck hit my bank Oct 30th; I ordered a photocopy of it which I will send you if for some reason you think I am being untruthful. The 20th of Nov I sent u an email, you kindly sent me a copy of your book, which I thank you. I have not yet received a copy of your CD. I am assuming you completed your CD & misplaced my address; if not forgive me for my impatience. Best wishes in your endeavors.

Kind Regards

Warren Opheim

14917 Manitou Rd NE

Prior Lk, MN

55372

P.S. I downloaded Island Logix's simulator & was disappointed because it didn't have Xspice, so it won't simulate a magnetic core whereas their demo version did. I think www.beigebag.com <<http://www.beigebag.com>> has a little better simulator with more complete documentation.

Don Smith

Warren, no problem, will send tomorrow, simply had a full plate and time did me in. I have a long list of programs that do magnetics. Most of them are very specialized and very expensive. If I can locate it will e-mail You a Copy. Thanks for being patient. Have a great new year, Don Smith

Warren Opheim

Dear Mr. Smith:

Thanks for your reply, sorry.. didn't mean to sound ungracious. Any programs & or suggestions for material/size would be very gratefully received. I found some Permandur but @ \$300 25.4x120mm kind of pricey. If stainless would work maybe #416, but I don't think it's magnetostrictive. Maybe a mumetal with cobalt would be my best bet.

Thanks again

Kind Regards

Warren Opheim

Don Smith

The CD You will have shortly has the program, Berkeley X-Spice (UpDated by the University of Barcelona). It's the one that started it all.

Warren Opheim

Dear Mr. Smith:

Recieved your CD, which I thank you. I was wondering what format your CD writer wrote it in? I tried to read it using 6 different CD/DVD/CDRW players. I was able to view the icons on all of them; but the contents of some of the files, only one CD player could view & then I received errors trying to copy some of them off the disk (crc errors etc..). If I mail the disk back to you, could you please send me a CD that I can read?

Thank You

Warren Opheim

Donald Smith

Warren, there are about 200 of the CD's out and only two people have had problems, once understood that many different files from from all over the World are included, the potential for problems exist. The Copy Program I used is Easy CD Creator V-5, Platinum which is the Rolls Royce of Copy programs (Look up on the Internet). The Computers involved are Pentium II's and II's, Athelon 333 Mhz up to 1.5 Ghz. The CD-RW used for the Disk is HP 9600 series. Multiple file readers such as Paperport, Paint Brush, and others are helpful. A large % of the files require a PDF reader up and running, then accessing the files. All the files are quite readeable to a knowing person. For You to duplicate the effort required to put the disk out, would require Your siting at the computer, 18 hrs per day for months. The Disk is a goodwill effort at sharing information which I consider relevent, as is the Book. The Book is largely My Theories going through maturation and the Disk relates to the same developing process. Together they represent a life time of thinking by someone who is in the know. Money collected for these items requires subsidizing by me. For example one set of ink cartages for one printer cost about \$80. per set and requires replacing about 3 times per week. There are three of these printers. Priorty mail is about \$200. plus per week. Add in about 80 hrs. of none paid work. This is on top of a very crowded schedule which is none comprimising. Include responding to about 200 e-mails per day and other. You keep the disk and if You think appropriate, I will refund the \$30. which I am shure You need more than I.

Best Wishes, Don Smith

Energy Useful Defined.pdf

Donald Smith

There will be a series of these leading up constructing Your very own Device .

Regards , Don Smith

Useful energy occurs as the result of imbalances of ambient and is a transient phenomena. In the electrical field it is a closed system subject to heat death, which severely limits its utility. The flip side of the electron produces magnetic waves which are an open system, not subject to heat death. These waves being unrestricted are the universal source of energy. When resonate unlimited duplicates from this one source are available. Therefor the key to unlimited energy is Magnetic Resonance. In order to understand this requires putting a stake through the Heart of Antique Physics. Nonlinear and Open Systems are universally available in Magnetic Resonance Systems, Explosions of any sort [includes Atomic] Combustibles of any type. Mechanical equivalents would be levers, pulleys and hydraulics. A highly obvious example is the Piano where the Key impacts the one note giving one sound level, which resonates with it's two side keys providing a much higher level. Magnetic Resonance Energy clearly amplifies it's self demonstrating more energy out than in.

Ohmic resistance does no apply to Magnetic Resonance which travels unrestricted for great distances, therefore multitudes of electrons are disturbed, who's back spin translates magnetic into usable electric energy. The right angle component of the magnetic flux provides - translates into useful electrical energy. Taken at right angle the Magnetic Dipole provides an unlimited source of electrical energy. The writer recognized world wide for his knowledge and experience. See his Web Site at altenergy-pro.com.

Activation of the flux system requires an off-on to activate the electron spin. This takes on various forms such as spark gap, frequency and resonate systems. Once activated unlimited duplicate copies of the energy present in the magnetic flux system is available without diminishing the source. To visualize this an electric generator is simply a series of off-on switches moving past a series magnets making unlimited duplicates of the same energy source. As such this an open system without limits. The right angle component of the magnetic flux is electrical flux which is electricity as we recognize. Electricity is a closed system subject to Ohm's Law and Heat Death. It is then obvious that resonate magnetic flux is the Key to obtaining Greater output by simply getting that which is there. It is not the something from nothing game played by the Physics Departments.

Norman Bollinger

Well for some time now I have been saying that we still do not know what electricity and magnetism are - we know its characteristics and how it performs but not what it is. Its like we used to call genetics but now we know underneath its DNA.

When we find out what the electrical equivalent of genetics DNA is things will be quite different.

So Don has always had some glimpses into the "electrical DNA" for me. For example - "The flip side of the electron produces magnetic waves which are an open system." and "These waves being unrestricted are the universal source of energy" editorially connected sentence "when resonate unlimited duplicates from this one source are available."

"Therefore the key to unlimited energy is Magnetic Resonance".

and "A highly obvious example is the Piano where the Key impacts the one note giving one sound level, which resonates with it's two side keys providing a much higher level. Magnetic reconance energy clearly amplifies it's self demonstrating more energy out than in."

Ok I accept that but how do I make it work for me?

and "The right angle component of the magnetic flux provides ... useful electrical energy."

Any thoughts folks?

Norman

Donald Smith

That's where we were headed with the recent aborted attempt occurred . Not to worry , we will succeed . I was 1/3 there when interference from energy elate bunch became intolerable

Einstein's 27 Sep 1905 paper available at

http://www.fourmilab.ch/etexts/einstein/E_mc2/www/

<http://www.gsjournal.net/old/ajay/sharma3.pdf>

Donald Smith

That is correct , it was Oliver Heavisides . His books were from the generation prior to Einstein who copied the idea . Princeton University is fully aware of this , since they were using Einstein for publicity the truth did not matter . Regards , Don Smith

ajay sharma

Dear Dr Smith

Could you please give me more details of Oliver Heavisides ' work

I am writing book

$E=mc^2$ after 100 years.

I have confirmed many mistakes in Einstein Sep 1905 paper and suggested an alternate equation to $E=mc^2$. I have spent over 15 years on the topic.

I will be thankful to you if you could send more information about Oliver Heaviside.

Thanks

Sincerely

AJAY SHARMA

Don Smith's Ambient Energy Device

Bruce A. Perreault

Good Morning Everyone!

Don Smith's Ambient Energy Device is a modern day version of what Tesla demonstrated in the late 19th and early 20th Centuries. It is not a difficult circuit to understand but a few people have backed Don into a corner and degraded his contribution. Don sent me a few key components a few years back I still haven't had the chance to add them into a proof-of-concept circuit. However, I can say that it will transform the associated Tesla circuitry into a silent running device. A guy named Jimmy Reed has a composite device that consists of Don's and one of my designs that is a functional proof-of-concept and when I get the time I will add it to my own version of the device. Perhaps, it will be at Inventor's Weekend June 2005 in Manchester, New Hampshire. We will see. I still haven't made up my mind yet if Inventor's Weekend 2005 is to be or not to be. The device is actually so simple that a boy or girl scout could build it with no problem but this seems to be beyond the scope of people like Decker. These people have defamed this particular Tesla into something that it is not and has effectively caused Don Smith to back off in fear of being further ridiculed. This is implorable in my opinion. Why can't these dunderheads just take things at face value and recognize the contributions to our movement instead of constantly tearing down the lives of our messengers, including myself. This is beyond my comprehension and you have to question these people's motives. Continuing this negative trend will result in zero energy solutions. I call for everyone in 2005 to take a stand for progress and discourage digressive dialogs.

-B.A. Perreault

(see the related youtube video <https://www.youtube.com/watch?v=nxL-fbL2xxo>)

Don Smith's Devices *(2005 Inventor's Weekend conference)*

fleubis

Yes, it was a great conference and we all learned a great deal! It was great to meet Bruce and see his progress on Swedish Stone and to finally meet Don Smith.

Now looking at the pix of one of those devices in the slides Don Smith presented, with the circular array of coils plus the description on his website, and what little I gleaned from talking to him, it would seem that to accomplish the impossible, Don has actually invented a shielding for magnetic flux or at least allowing it to be redirected. Traditional science has no known method of shielding magnetic flux (not to be confused with electromagnetic radiation for which there are known methods). The rotating wheel he describes consisting of segments of this unknown material would induce current between magnet and coil when interposed.

Don did mention spraying adhesive on the wheel and applying various powdered metals to it then peeling away tape for the unneeded segments. As to which metals, he only mentioned Barium..... Also mentioned were super capacitors which he used in the 24v range and he has an unlimited supply of a certain dielectric material for which he may be making his own capacitors and many of you will remember noticing the high-current bridge diodes in many of his device pix.

Just my thoughts, and I wanted to get them out there while the conference materials are still fresh on my mind!

New uses for my gaussmeter!

James Davis

Re: A message from Don Smith *(original message seems to be deleted, recovered it from the forwarded copy)*

Bruce A. Perreault

Hello Group,

I just received this e-mail from Don Smith...

"Dear Bruce , You are familiar with sparking experiment and two capacitor plates , next step is placing an ungrounded transformer nearby in the associated resonate magnetic flux field , it can one or several transformers , this is Device One <http://altenergy-pro.com> from my website . This arrangement makes multiple exact copies of the flux field present which is much greater than the electrical input due to ambient energy incorporated into the resonate magnetic flux field being generated . Test the output at the ungrounded separate transformers . I hope this will help . Regards , Don Smith"

What if Don is correct and that the energy is actually being pumped out of the ambient energy field of the planet? It is an interesting thought and once group members build their own prototypes we can all explore this possibility. I have asked Don to join our group because it is right up his ally what we are doing with radiant energy.

-Bruce P.

Here's Device #1

<http://altenergy-pro.com/device01.htm>

But perhaps Don meant Device #2?

<http://altenergy-pro.com/device02.htm>

Doctor Whodini

Bruce,

There's one catch. His sparking system has to be in synchronization with the Telluric Potential. Otherwise, he won't get this amplification effect. Once he gets this effect, the idea is to phase lock to it at this rate.

I'm presently working on a system that will do this.

Bill

Tate power ambient circuit update

GEOFF EGEL

Hi all

No doubt many on this newsgroup may have already see my article on the Tate ambient power module on my brightsparks website ,up to now I did not have some component values,it seems there was patent that showed these values and this gif diagram has now been placed at my website as as below,

<http://www2.murray.net.au/users/egel/tate.htm>

if this does not work try this instead

<http://www2.murray.net.au/users/egel/tate.html> ,I can't quite remember the actual extender

Thanks to the person that sent me this updated info.

Please note this device only gives small amounts of power that could light a Led ,a small watch or radio depending on the radio source you are tapping.

I doubt it's a practical device as such but it seems would make an interesting conversation piece.

Geoff

Don Smith

Geoff , the reason the power is so low is the capacitors being used. If larger capacitors such as used for power audio systems or the newer super capacitors such as the 50-500 Farad units You will begin to see real power. The schematics shows a great deal of naivety on the part of the Inventor and the issuing Patent Office. The basic idea is 1000% It relates to My Earth Electrical System II from 15 years ago

Don Smith :-)

GEOFF EGEL

Thanks Don

I will add that info to the page in question as well

Geoff

Interesting Don Smith Email

Nick Finelli

Don,

Greetings. I am a fellow free energy researcher residing in New York. I have been interested in your work since I first saw your video tape of the presentation you made at the Tesla Symposium. I have only recently found your work on the internet. Of all the ideas for free energy I have seen, including bad ideas and the frauds, I believe you have one of the only good theories out there. The reason I agree with your work; I have come to the same conclusions about resonance after researching Nikola Tesla's work. I have a background in electronics and electrical engineering, but I have experimented very little on the topic. One thing I have noticed is the elegance of your designs. Pre fabricated High Voltage inverters, Capacitors in circuits whose values were obviously chosen for tuning in the design/engineering phase before construction.

However, I have some questions in reference to the photos on your web sight. In particular, the model on the board you presented on the Video. On your web sight it is called Resonant Energy Device. There does not seem to be an output tank circuit to derive a useable voltage from the high voltage. Is there a completed missing component section?

Also, why do you need a feedback coil? Is this for charging the battery? There is nothing hooked up to this coil's output. In addition, does the voltage inverter device have a 60 cycle output? If so, how do you resonate the Resonant coil with 60 Hz? Is it designed to operate at this frequency or does the Neon sign Rheostat control the frequency somehow?

I would like to try to build one of these devices for home use, but there are too many un-answered questions. I was also wondering if you had any schematics available that you have made public. You mentioned on the video tape that they found your briefcase at the symposium and were selling copies of schematics in the bookstore. Are these available?

Sincerely,
Nick Finelli

Don Smith

Nick your observations are 100%. In order to put in context, several statements are required. I work with modular units. A completed project may have several modules, such as input source, main module, energy storage module, inverter and output module. In some cases these are partially combined.. The benefit is not having to rebuild the complete system each time, thus conserving time and expenses. For example the change from voltage to coulombs (volt amperes) using say four 50 farad capacitors. They are shoe box size and cost about \$2000 each. One unit as modular can be switched between devices as required. Simplicity is a requirement with most the direct approach possible. A great deal of thinking and planing is a part of each device. There are hundreds of these devices. They look very different, but in actuality they all add up to the information composted and available on my web site. This opens a door to a world of new electrical devices not previously known. Electricity as presented by the establishment got off the track some where about 1900's and has been out in left field ever since. Tesla was the only obvious one that stayed on course. My main purpose is to get people back on the right track. Picking out the right information and adding the missing pieces is a wide open field with near zero competition.

A considerable amount of time and money is invested in the devices you have viewed. As such when presented in some cases as a protective measure there are improper connections and other methods to slow down those out

for a free ride. This should not be much of a problem for you. I wish you well and will be looking forward to new and original interpretations which incorporate the approaches viewed on the website.

Response to your questions:

1. High voltage at high frequency pumps lots of coulombs at a high rate of repetition. This extra energy gets into the system from the Earth's ambient background. Magnets and or coil systems depending on their magnetic permeability reflect this ambient energy. They work very much like an antenna and transformer system, having only receptive energy which is passed through the electron flip system into temporary storage into useful energy.
2. The final output is indistinguishable from your domestic power company.
3. Schematics prototyped by computer programs such as Islandlogix's VisualSpice prior to actual model building saves much time. This works very well and believe it or not over unity and free energy shows up in the simulations.

Hope that this is helpful, Dr. Smith

Our Glo-Regulator Circuit is a "Negative Resistance Resonant Oscillator"

* This was just sent to me from Don Smith

Negative Resistance Resonant Oscillator

The Circuit

The generation of waveforms by negative resistance is typically found in ultra-high frequency applications. Gunn, Impatt and Tunnel diodes are used because these devices exhibit this unusual but useful voltage to current characteristic. A negative resistance region is characterized by an increase in voltage with proportional decrease in current. Among its many uses, negative resistance may be utilized for sine wave generation in resonant circuits. When negative resistance is added to inductors and capacitors, losses can be cancelled out causing rising oscillations if the circuit is unbalanced. Stabilization of the output amplitudes will take place when the bounds of the negative resistance are exceeded.

-BAP

Robin van Spaandonk

If you read this carefully, you will see that it doesn't say that this is a DC negative resistance. I.e. not free energy. It only talks about increases and decreases, i.e. Don is talking about a negative slope on the resistance curve, however the actual resistance is still positive. What this really means is that the devices in question are within a certain range voltage controlled resistors, i.e. as the voltage goes up, the resistance goes up even faster, resulting in a drop in current. This could indeed be happening in your tube, however in itself it isn't a source of free power.

Bruce A. Perreault

Robin,

Yes, I know that the glo-regulator is not drawing in excess energy through negative resistance in itself. I merely pointed out that it is allowing the circuit to function in the zero or negative resistance mode.
