

“Cold Fusion”

(An energy reaction at near (or) close to room temperature)

This is the CONCISE WORKS of “Nigel”

Preface

In order for you all to be able to understand what I have chosen to write below; I will address someone else I once knew; **Doctor Martin Luther King**, he once set in motion a change before mankind with a short comment, “I have a dream [...]”

This document is my last will and testament before humanity, I do not know it’s out-come today, but if history repeats itself I am surely to die in the coming days, I will be assassinated for what I am going to tell you. My name is Nigel, (anything else is of no significance); I have an IQ beyond a number that humans can calculate, it is my curse; A burden that I must carry alone, but in that burden I can give back to mankind something very special; but this time it **WILL NOT BE STOLEN**[!].

*“I do **NOT** dream; But I see the future, I have done so for as long as I can remember, I can see so many years in the future; That my fellow humans, is the **whole truth and not a lie**. I saw the bar-code, the laser, the TURBO and ECI; I saw USB, the Smartphone, Wi-Fi, Bluetooth, fiber-optic cable, and the worldwide web, I saw the laptop along with virtual machines, the cloud and anti-virus, Satellite TV Sky and BskyB, Streaming media, (You-tube and the like); I saw DRM, I saw the euro tunnel and more, I saw chip and pin, RFI, and over the horizon targeting and the drone, I saw Apple, and Windows, Oracle too, I saw “military technology of the cruelest kind” (please forgive me); I saw meta-data collection with NATO, US, UK, CIA / NSA, GCHQ now using against its own people; And it’s pain and suffering; that’s just to name a few of the things I saw in my past, all have come true.*

Today I see a future for mankind, a bright and wonderful new direction, free of pain and suffering, free of greed and power, free of chastity and enslavement and abuse. I see an energy source of infinite power that is drawn from the universe and not stolen from this planet, I see communications that reach beyond our star, I see food for all, and a free for all for all of mankind, I see 1% of humans hurting the 99%, I see my planet being ravaged and assaulted for its resources when there was never a need to do so; I see a NEW future of mankind.

*Thirty years ago, I saw the future of time itself [!]; I saw a power so immense, I showed it to some military people (**I was young and knew no different**), I showed them the power of infinity over one. I produced “light” from thin air, I made pop-corn for a party trick, I made water burn, and I made heat from a vacuum, and I made an infinite supply of pure clean energy for mankind. I gave all of this as a GIFT to mankind and to humanity as a whole; that my dear humans was THIRTY YEARS ago[!].*

*For 30 year’s, “OTHERS” have denied my FREE WILL; This gift to humanity; the right to be free from all forms of chastity, bondage, pain and suffering, free from the curse of money and greed; I GAVE it ALL openly to humanity, **a gift of infinite power**, a gift of time itself; I saw the **golden fish**. I gave to you the gift of EMC (Electro Magnetic Compression) formed within an EMI (Electro Magnetic Intensifier). The following pages describe each step and I hope this time mankind choses to follow my wisdom and not bow down to the enslavement by another”.*

Thank you for reading [AND PLEASE HELP ME]; (Nigel).

A little bit of sartorial rhetoric to get the show on the road.

As a porn star, I could write a book on the best way to fuck, suck, hump, lay, (or) get laid, which position and why, and how to give the best orgasm of a person's life. (*But you've seen my video's, my pictures and read what I written*); So, there is no need to write more on those topics; Though: If enough people read this short book and heed it's words, a book that will help each of you to produce ONE free energy device, then I'll write the book of LUST, debauchery and more.

Let's move forward and make lots and lots of FREE light's, FREE battery chargers (hold on we don't even need those), FREE power supplies for TV's, Computers, and Multimedia players, FREE heating and Cooling, FREE motion and transportation, FREE just about anything that uses one of four; Four being (Oil, Coal, Gas and Electricity). All without exception can be disposed of and replaced; all you got to do is read and follow the instructions.

In the beginning; there was (*according to others*), a BIG BANG, and according to "*others*", a "godly" event, creating all and everything. Both, (*the big bang [and] the godly event*) are supported by a myriad of documents. Documents written by him (*or*) her in our past, where, they (*him (or) her*) claimed to know, or claimed to have an intellect higher than the "average" him, or her. To examine both the "Big Bang", (and) the "*farcical*" Godly event, each has to be examined in turn. Firstly, the Big Bang [!]

At a point in time, that of time "0" (Zero), where the clock read Zero Years, Zero Months, Zero Days, hours and of course, the infinitesimally smaller part of a given timeframe, the infamous 0.000,000,000,001 of a second; in fact, as small as you want to go in time or part thereof, there has to be a point where ZERO become ONE, and where one became a multiple of itself (2,3,4 and so on); Though, all of a sudden, out of the blue, from nowhere, everything "We" know, everything We are, everything about us, our very existence and the universe came from absolutely NOTHING [?] (*Now which magician dreamt that one up?*) it's very similar to a "re-boot" or "start-up" of your new iPhone; It starts as a nothing (*a chunk of metal and plastic*), but when you apply power to the device, all of a sudden it becomes an extension of YOU.

Secondly, in the beginning there was nothing, no heaven or stars, no day or night, and of course NO MAN. So, the "Entity" of unknown origin (*residing outside of time, on the other side of zero [?]*), all of a sudden decided on its own accord, to create everything, the heaven, the stars, day and night and of course mankind [?].

(<https://www.biblegateway.com/passage/?search=Genesis+1&version=KJV>)

To view both in a common day perspective, let's bake a cake, a simple layer cake, a sponge cake with jam and cream, some flour (*from nowhere*), two eggs (*from a chicken, (or) was it the egg*), some sugar from a non-existent plant, some fruit jam from nowhere, and cream from a magic cow, (*from nowhere*); Get the idea.

Both events, the big bang and the godly event both claim to have created something from nothing, BUT NOT at room temperature, (*cold fusion*). For the big bang, (*massive heat of immense proportions*), a nuclear reaction within the stars, an energy release of untold and

unimaginable proportions took place (*now which magician dreamt that one up [?]*). For the godly event, “Oh”, while ingesting the wonderful NATURAL and medicinal compound of **Tetrahydrocannabinol**. (*Hash, Pot, Weed, Grass however you want to call it*), someone who was now in a rather placid place decided to write [...] “In the beginning ...” a state of “*Sartorial skepticism*” [and] you lot believed it!

The only big bang that took place was the bang of a big person falling from grace, and the only godly event that took place was the **Tetrahydrocannabinol** action resulting the orgasmic response of “*Oh my GOD what has just happened to me*” ☺

Cold Fusion is here today, that is right now, and **not** around the corner, cold fusion occurs all around, you just got to know where to find it. Something from nothing is an impossibility, there must be something to start with, (*are you really sure*) [?].

It has been said: “You will get a better result in a “suck”, “making a vacuum” than blowing or compression”, ask any man or woman which is better a suck or a blow and what produces the best result. A blow creates a pressure, a force against another, a suck is to entice something from nothing, and will always produce something that was not there at the start. It can be a surprise to some and the desired result of others; but either way, a suck will always win. Thus, if a suck, (*a vacuum*) results in the desired effect (*something from nothing*), and is not a surprise, then it [IS] **Cold Fusion**; now that’s “HOT STUFF”.

Having dismissed both farcical events, (*the Big Bang, and the godly event*), leads to: “**OK smart arse, show me cold fusion**”.

So, let’s make cold fusion, in your home, on your desk, in your sink, where ever you choose to create cold fusion, and please be remained of the literal words of “Oh and MY”, “My” being part thereof of me, myself and humanity.

Take some water in a tube, make the tube narrow at the input end, make the far-end wider than its start, hang (*it*) upside down, (*Mr. Isaac Newton will do the rest*); The weight of the water falling and expanding in to the void below (*a vacuum, a suck*) and will cause the water to try and fill all space in between the boundaries of the tube, make it long enough and strong enough and the water will rip itself apart, it will collapse the ionic bond of Hydrogen and Oxygen; Resulting in a gaseous release of both Hydrogen and Oxygen as their Nobel gases. Now, before you all shout, dance up and down, scream at the top of your voice, “I don’t have a tube that long”, I’ll respond with say “150 to 200mm” it just perfect, (*if you know what you’re doing*). Remember for this job or task, its suck, suck and suck, and never a blow (job) and never a task that can never be undertaken.

Take your 150 to 200mm “tube” (or) “pipe”; Elevate to an angle 45° (from this “|” to “/” this); call upon Archimedes’, (A fantastic SCREW), “Hey Mr. Archimedes, what do I do next?”, “*Twist the screw, stretch and pull it backwards as far as it will go; hold it there and never let it go, now suck[!] and you’ll get your cold fusion before your very eye’s*”. Ask for a demonstration, well that can also be provided (upon request of course).

The irony of an ionic bond is the force of opposite attracts; that of plus and minus (+ and -) and its resultant effect upon the smallest of objects, the mighty atom. Starting at the bottom, (*as you always do*) results in the simplest atom known to man, the singular most eventful atom that of Hydrogen, it’s size is one, its mass is one of itself, it has one proton, and one neutron, its

electron count is also one, along with its orbital of one, it has one charge that is positively annoying, and entices the negativity of other atoms towards it, (a **suck**). Oxygen is number eight, eight of all of the above but its negativity is equally balanced in two parts and result in TWO hydrogen atoms to be sucked towards the big “O”. Two little “h’s” and a big “O” makes H₂O, it is simple as that. The suck of two “H’s” and big “O” is so strong that mankind has never, (*until now*), known how to separate the two without brute force (pressure, heat, or collision). That WAS until now. Enter stage left “Mr. Magneto”, and exit stage right “Mr. Force, Pressure and Mr. Heat” (Mr. Collision is a result of the other three as a collective).

Mr. Magneto is two of itself but one of itself in five parts of two built from three of one, and two of one; “How can that be so?” I hear you all ask; Simple, just look at your hands and your fingers and you will see a magnet in each. Each hand has five fingers, each finger has three bones, with the exception of the thumb (which is one (of) two parts). There is a left and a right, top and bottom, they can be place side by side, but never back to back. Placing your hands together (palm to palm) fold your index fingers across each other, rotate though 180° and one of each finger is projected in the opposite direction at 90° to itself. (exactly how an electromagnet field is projected); “The plane of polarization is at 90° to the electric wave”. Place you palms together, now flat on a surface, it does not matter how hard you try or force or push you will never close the gap, a gap of infinity before your very eyes. Place your palms together, rotate your thumbs through 90°, move your thumbs forward to form a heart shape; this is the compression point of EM energy (North and South) creating an entry and an exit within a void (a vacuum); a magneto pump. Hold your hands above your head to form a surrender, place on the clock position of ten minutes to two, (A mathematical 2:1 (of) five (of) three (of) two); place at 45° above your head (10 to 2) and you have the optimum position for energy extraction, that being 45° in both planes of polarization (go look at the most perfect antenna, the one in your smartphone (45° in all planes of polarization)).

Use the riddle and poem:

“Two dead men got up in the middle of the night, back to back they faced each other, drew their swords and shot each other”

“Two static magnets facing North are pointing South, stuck together as a pair but facing each other (North to North and South to South) aiming their EM field like a lance creates an energy that will leave you in a trance”. ☺

Put it all together and what do you have, COLD FUSION before your very eyes. You just got known how to get to it.

Take one device of ten (magnets) or (fingers) in two pairs (two hands), place them opposite to each other (NS SN NS SN NS) five pairs of ten create four fields (fingers) from one device (thumb); COLD FUSION you just have to know where to find it. Place in a tube of 150 to 200mm long make a vacuum and break the bond (Hydrogen and Oxygen); with the bond now gone, the gas is free, free to use for infinity. Take your fuel and add a spark, and once again the BIG BANG will occur from nothing. (*from a void of nothing more than two opposing magnets*), it is possible to create COLD FUSION within your hands, the gas that is free is pollutant free, and when combusted to create an energy release, the waste product is the same product that you started with; Good old fashioned H₂O (Water); what could be more simple than that.

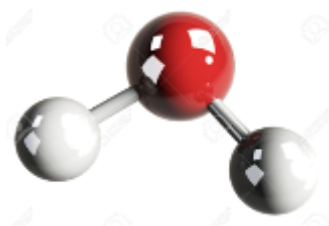

Section ONE: Magnet fundamental's

Here's the question, here is the task and problem. If you have "some" water (be it saltwater (or) fresh); how the hell do you turn it into a gas without use any external power?

Let's look at the problem:

H₂O [Two Hydrogen atoms "ionically glued" to one Oxygen atom]

What is "Ionically glued"

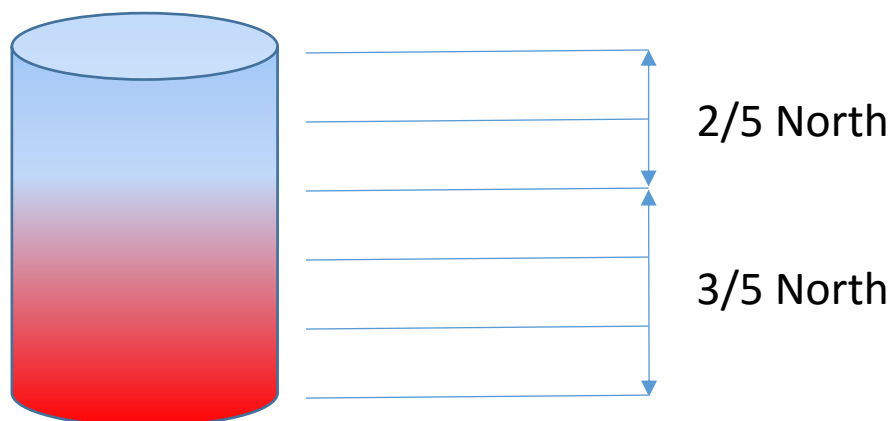

Above is a single "molecule" of WATER, and it is made up (of) Two Hydrogen atoms (white) and One Oxygen atom (red). The "Ionically glued" bit is the two interconnecting arms between the molecules. The angular difference between the "H's" and the "O" is 104.2° (*a bit of extra info*), the ionic "CHARGE" between the H's and the O is plus and minus with a resultant value of the Oxygen being predominantly NEGATIVE.

Let's hold the problem there and investigate a few properties of a magnet; all magnets (that we are going to use (*at this time*)) have a North and a South (or) a "plus" and a "minus"; the "polar fields" can also be assumed as Positive and Negative, and the values are assigned Positive (+) to the North, and Negative (-) to the South. [Now that was easy].

Having established a "value" to each polar field, it becomes necessary to understand how much "Positive" (or) "Negative" energy is within each polar field; This gets fun [!];

Firstly, North and South suggest half and half or fifty percent to the North polar field and fifty percent to South polar field; alas, it is not that simple. The polar fields of a magnet are **NOT EQUAL** [!], equal as in 50% - 50%; They are in a permanent state of imbalance (or) unequal, and is why two magnets want to stick together.

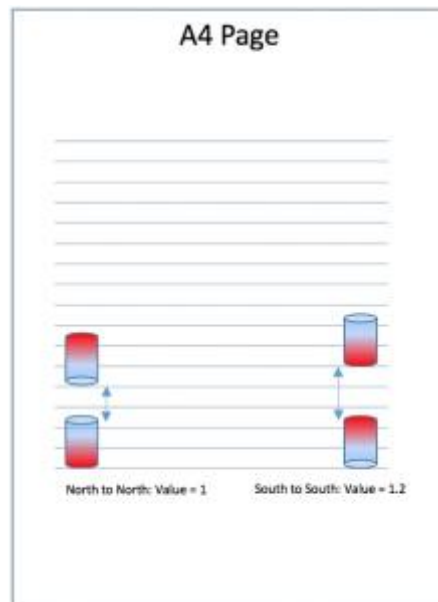

Secondly, it is necessary to view a magnet in "slices" in fact five slices as shown below:

All magnet's, all polar fields, and all associated Electromagnetic energy (*within a magnet*) is "proportionally" displaced as shown above; that is 2/5th to the North and 3/5th to the South; this

“displacement” or imbalance is the “tool” that we will use to separate (or) break the “IONIC BOND” between Hydrogen and Oxygen within the water molecule (H₂O). Converting 2/5th and 3/5th to a numeric (a value) or a “RATIO” results in the value of 2:2.4 (in favor of South) or to divide down results in 1:1.2 (in favor of South).

This value or “energy” can be tested and proven with a simple sheet of paper.

As shown above, the displacement between North to North is clearly different from that of the South to South condition, it is different by “exactly” 2:2.4:1 (or) 1.2 in favor of South. (*Now that’s a clever bit of information*). We all know that if the magnets are reversed they will “stick” together, well they do not “stick” as in a glue, but are held together by the magnetic force ratio; and ALL magnets, however so formed, WILL stick together with the North being pulled towards the South, and NOT the other way around, (*South being drawn towards North*).

Section one summary:

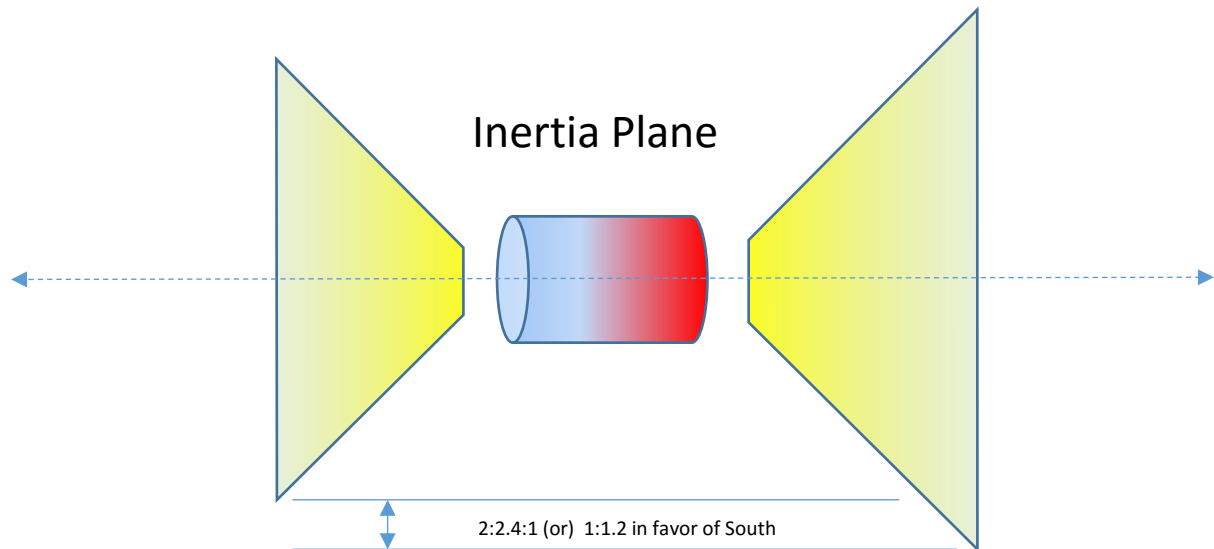

1. Magnets have a North and a South.
2. The North and the South are NOT equal.
3. The EM force ratio is 2:2.4:1 (or) 1:1.2 in favor of South.
4. Magnetic fields are always attracted to the predominant South and not the North.
5. The Polar displacement can be measured with a visible ration of 1:1.2

Question [?]; Is it possible to create a “greater” displacement between two polar fields using two magnets [?]

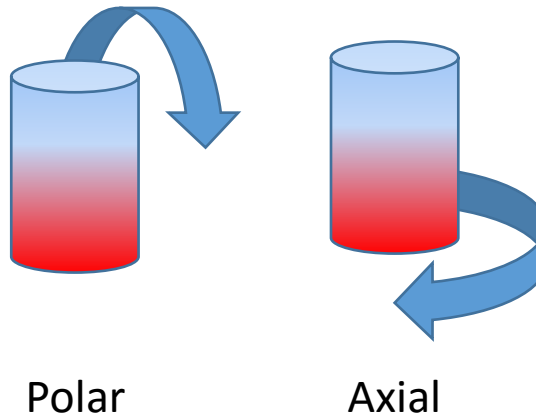

Section Two: The “Inertia Plane”

In section one; Magnets were defined as “North” and “South”, and their EM “Force” (or) “Energy” which is 2:2.4:1 in favor of South.

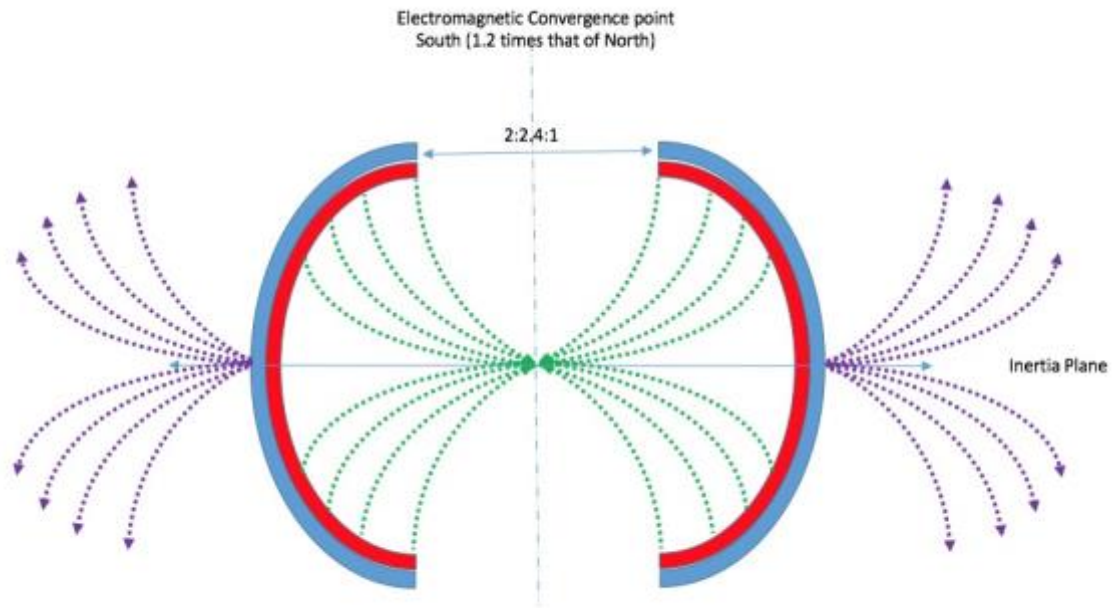

We will now discuss and “discover” the “Inertia Plane”, this is an “invisible” (*to the naked eye*) plane; But can easily be represented as two “lens’s” of a “Double ended” flashlight.

The Inertia plane is directly proportional to the polar plane and the polar plane aligns itself to the construction of the magnet in question. There are two types of polar plane BUT “ONLY” one type of inertia plane. The two types of polar plane are known as “Polar” and “Axial” as shown below:

A magnet with an “EM” field in “Polar” plane is the same as the planet Earth, (*the E.M. energy rotates “top to bottom”*); Whereas a magnet with an “Axial” plane is totally different, (*it’s E.M. energy is “rotational” about a common axis*). But the inertia plane remains the same, that of the axis of the polar plane. To now consider changing the fundamental shape of a magnet from a cylinder to that of a curve, (*something like a piece of orange peel*), with the magnetic plane on either side of the surface of the curve results in an expansion in the North field and a clear visible compression with the South field as shown below.

Two “curved” magnets as shown as TWO pairs, (left and right); the “inner surface” being “South” and the outer surface being “North”. The North field is “dissipated” (or) weakened by the curvature of the surface, (just like the planet Earth’s E.M. field); The South field is “concentrated” or compressed to a point (of) convergence. The point of “convergence” is known as the “LOCUS” point. To make the drawing more “functional”, “We” will add a few BASIC or SIMPLE values, “We” will assume that the North and the South as a whole object has a numerical value of “8”, (as shown by the purple and green dotted lines). On the North face, the value of “8” is “dissipated” or weakened though, the combined output of energy is still “8” but it is very weak within its “Inertia plane”; Whereas, on the South face, (the inwards facing field), the inertia plane is compressed (or) concentrated to a single focal point, (The LOCUS point); Therefore, “a” curved magnet WILL produce a higher output of E.M. energy in the South field when the magnet is curved. If TWO magnets are now placed face to face [...], (“Two dead men got up in the middle of night, back to back they faced each other, drew their swords and shot each other”).

In section “one” a question was asked:

Question [?]; Is it possible to create a “greater” displacement between two polar fields using two magnets [?]

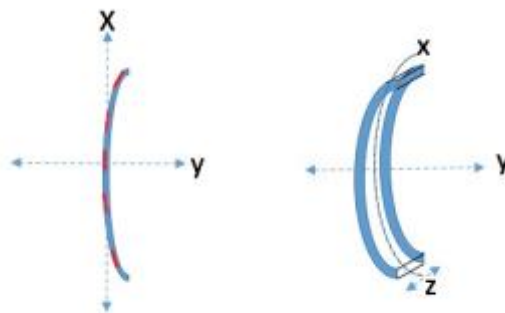

And, as shown above the answer is a very clear “YES” [!]; Two magnets of the right shape can produce more “inertia” force than that of the same input from to flat surfaces.

Question [?]; Given that Two magnets can create a greater inertia condition, is it possible to move the inertia plane [?].

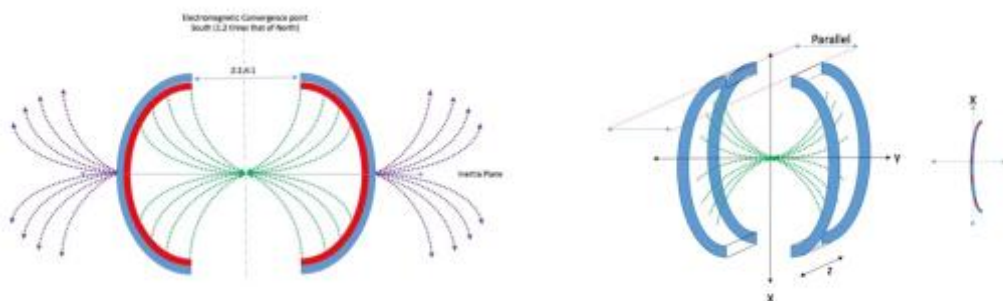

Section Three: The three-dimensional re-representation of a two-dimensional condition (of) the inertia plane.

Within sections one and two, a magnet (or) two magnets were shown with their individual characteristics, their Polar condition, their polar plane, inertia plane; alas, all three conditions or planes are represented as a two-dimensional aspect; But we live in a three-dimensional world; So, it must also exist within magnet's, that their plane and inertia states must also exist in a three-dimensional state. If we, now consider "What is two-dimensional" and "What is three-dimensional" [?]

Two-dimension resides in "x" [and] "y"; and three-dimensional resides in "x", "y" [and] "z" as shown below.

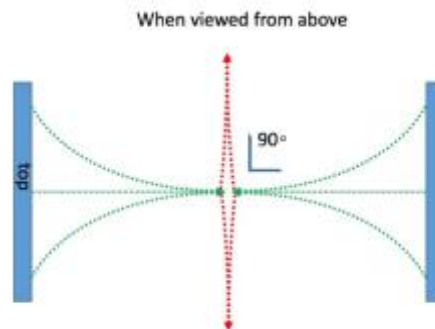

The image to the "left" above depicts (Left / Right) [and] (Up / Down); and the image to the "right" above depicts the "THIRD" axis or "3D" that being the "z" axis (or) in and out. Therefore, to fully understand the image below, it has to be understood that a third dimension to the image exists, that of the "z" axis; And, when compared (2D to 3D):

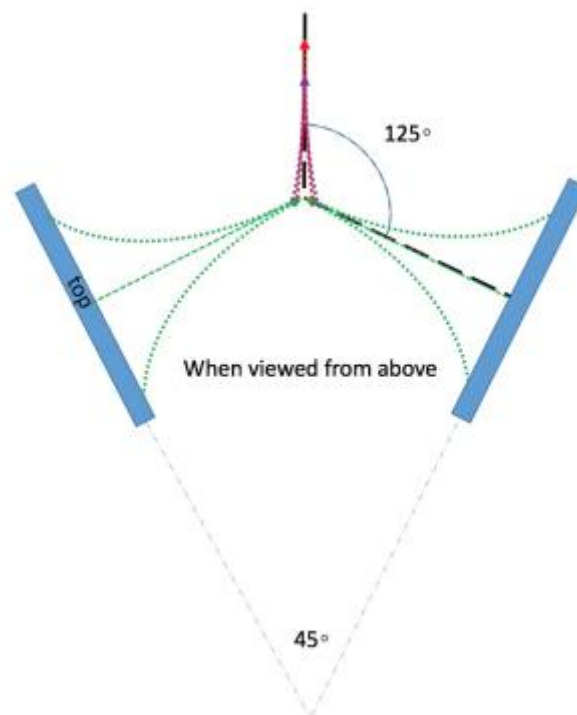

It can be seen that the two magnets are "Tangential" (and) "Parallel" to each other with a depth to their shape. Thus, the inertia plane (shown in green) is directly opposing each other and focused to a single point, the midpoint (or) LOCUS point between the two objects.

THIS [!!], this is when the real fun start's; To now think [...], *"The magnets are curved creating a focal point, there are two magnets opposed at 180° to each other, and the two magnets are tangential (and) parallel to each other; They are also "STATIC" in their movement in space, they are FIXED, as in NOT MOVING [!], thus the inertia plane remains STATIC"*. Everything is pointing to ONE point in space, (an infinitely small point); This point is known as the "PIN" "Point (of) Inertia Neutrality". We also know that North is weaker than the South, we also know that two South fields CANNOT touch. If the two fields point to the center are focused to a single point in the center and cannot touch, the two point MUST deflect in equal and opposite directions, but this is not possible due to the fact that the exact opposite is also an opposing force[!]; The result is

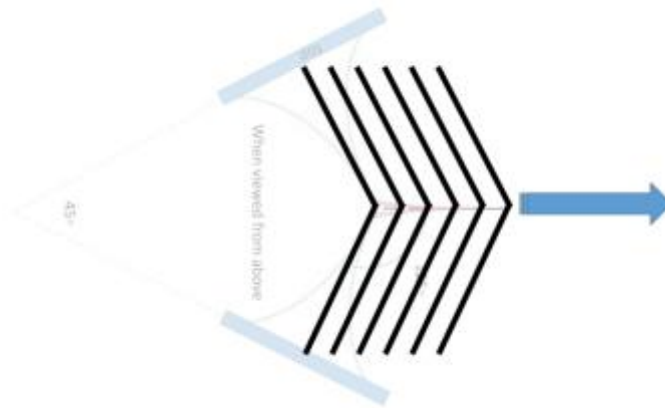

a MOVMENT in the inertia plane against that of all known E.M. conditional forces and that of $E=MC^2$ [!] and can be viewed below:

The inertia plane **MUST** move equally and proportionally to its own existence; Else every fundamental construct of Electromagnetic Energy within the known universe is **WRONG**. It can be seen that the inertia plane “**rotates**” itself about its own axis by 90° [!] To use a “modern” conception of a word to explain what has occurred, the word would be “synthetic”, “A synthetic inertia plan (SIP)””; To now compare the SIP and the PIN to another “synthetic” existence, that of the laser (*a coherent light source synthetically generated*) results in the E.M. fields that are produced by two curved magnets produce an EMAC’s (*Electromagnetic Amplification by Compression*). BUT [...], and it is a BIG but, the inertia plane although now rotated and condensed to a coherent beam of E.M. energy is **STILL** static within its new synthetic plane, it’s still **NOT** moving.

But, as soon as the magnets are moved from their parallel formation, to a 45° position, the EMACs SIP *flips* to form a single direction **AGAINST** the fundamental of all E.M. forces and inertia states throughout the whole known universe. The inertia plane is now at 125° from its original position; [and], as there are TWO “shifts” in EMAC’s SIP which equates to 250° of movement, the resultant part (or) 110° is **INERTIA** motion. Movement within the inertia plane, movement that is perpetual, movement from a static object, movement against all laws of the conservation of energy, mass and movement. To now simplify the above drawing results in what is known as the magneto chevron:

The magneto chevron points in the direction of the angular offset of the EMAC's SIP, it is an inertia movement towards infinity against that of the fundamentals of all electromagnetic energy. The movement defies the fundamental of "The plane of polarization is 90° to the electric wave, (*the fundamental of all telecommunication's*).

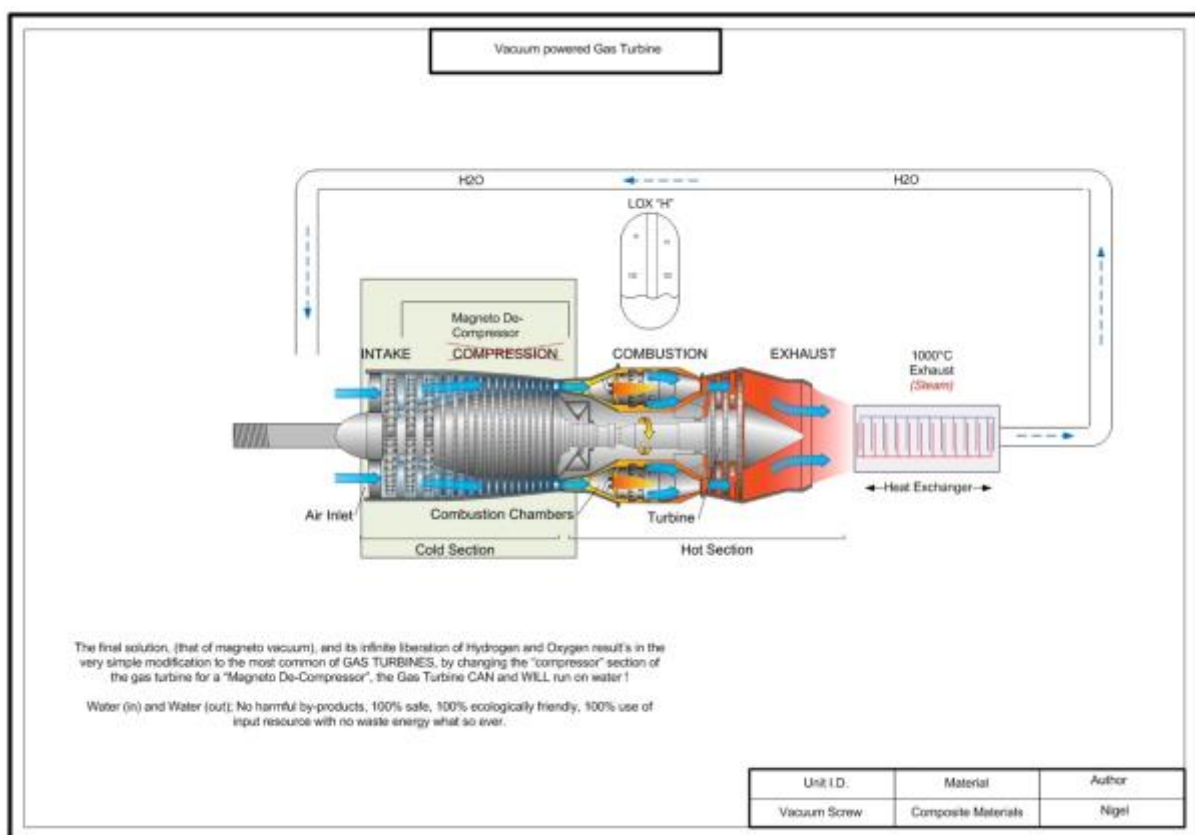

Section four: Utilizing Inertia movement as a replacement for “oil”.

This is the point where my life is now put at risk. We all know that OIL equal's \$\$\$ and we all know that \$\$\$ makes the world go around; We also know that \$\$\$ and OIL work against mankind and against the planet Earth; But EMAC's SIP movement of the PIN means that motion can be produced from a static object without the need of ANY input of energy what so ever, thus if energy can be created for free, there is no need for OIL, thus no need for the “\$\$\$” [!].

Back to the original question:

“If you have “some” water (be it saltwater (or) fresh); how the hell do you turn it into a gas without use any external power?”

This is the “Easy” part, if water is made to go one way (<<<<) in a vacuum it makes the water molecule expand, (< < < <), and if an EMACs SIP is overlaid (Using the South EMACs) (>>>>), the water molecules “RIP” themselves apart producing Hydrogen and Oxygen from the humble H₂O. The Hydrogen and the Oxygen, (when ignited with a spark) produce fifty times more power than ANY Hydrocarbon, that 50 times more power, 50 times more thrust and 50 times more usable heat. The heat when passed through a heat exchanger produce HOT water or (steam), the steam can be used to drive any turbine; and when an EMAC's SIP is used with in a gas turbine (Jet Engine), the only input fuel is H₂O, and the only output exhaust is also H₂O, it is the perfect GREEN MACHINE.

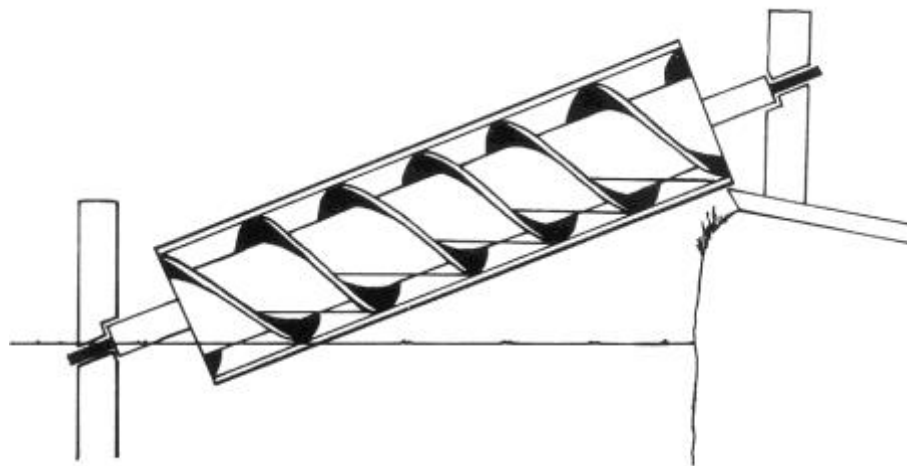

The possibilities are endless; the use of H₂O (water) as a fuel has to be, without a doubt the most fundamental breakthrough in human science. Although the previous picture represents a

“final” product, the how, the why and the wherefore must now be discussed. The how and the why is a little bit of “godly” magic, the wherefore is the once again the easy bit.

This section discuss’s the power of inertia, its ability to be moved (in any direction), alas $E=MC^2$ clearly claims that this is not possible [?], it is not a question of who is right (or) wrong, it a fact and not the assumed “de’ facto” standard that has been imposed upon each of you until today.

Let’s now examine, in closer detail, the “problem”; that of how to get energy from the most abundant fuel source on this planet, “WATER”; Water comes in two flavors, those being “Saltwater” ($H_2O + NaCl$) and “Freshwater” (H_2O (partly saturated with other minerals)). One “We” can drink and one we cannot; but **both** make fuel. The cool thing is, that if we use the one we **cannot** drink (saltwater), by the time the fuel extraction process is complete, the only by-product that remains is fresh drinking water. So, we take the stuff we **can’t** use, we use it to make fuel, energy, and power, then we **drink it**. What a perfect solution to the most basic need of mankind. Heat, fuel, power, and water.

We need to find a way of putting water into a vacuum, and we need to find a way to do so with the minimal use of input energy; This is where Mr. Archimedes enters the game; He came up with a very clever thing We all call the “Archimedes Screw”;

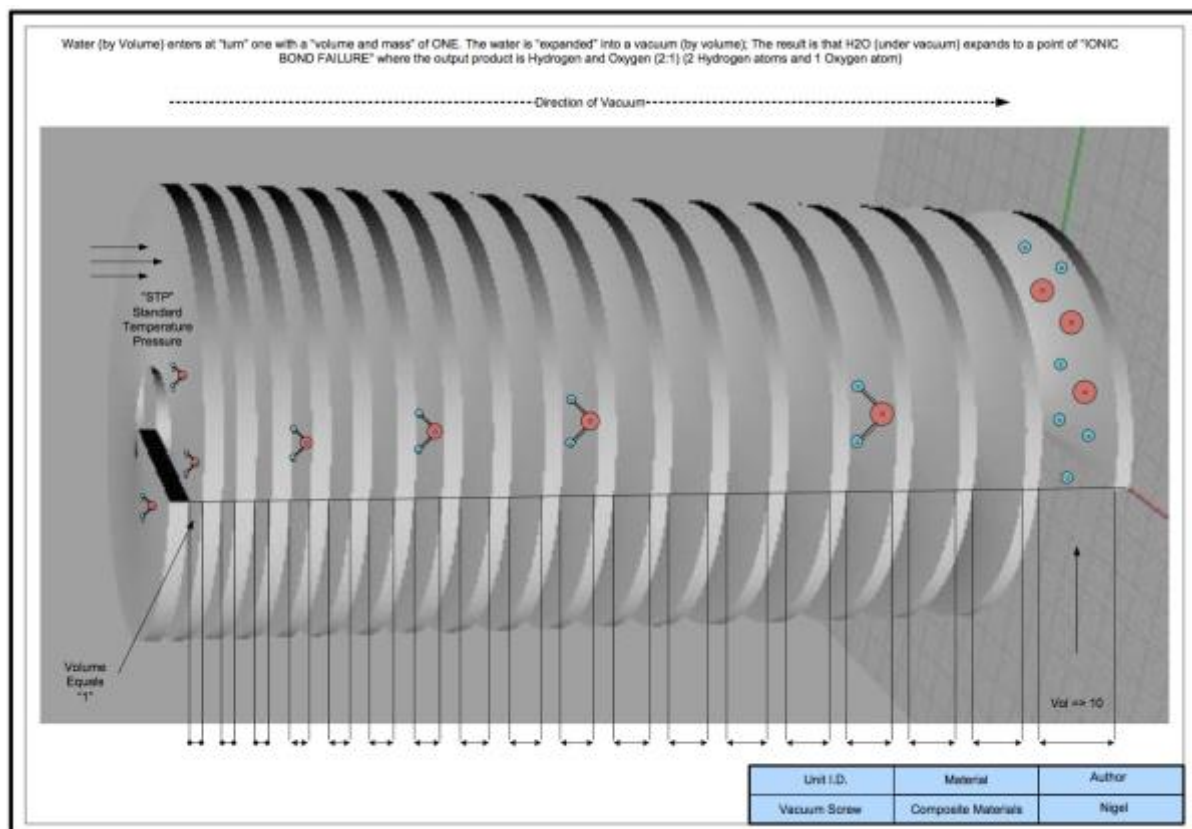

The design is simple, it uses a point of infinity about itself; the screw turns about its own axis but never moves; the water is carried along the screw and out of the other end, a simple piece of genius in a tube; but it has to be remembered that Mr. Archimedes only had access to the most rudimentary tools of his time, (*some wood, a chisel, a small amount of metal (iron) and a little bit on know-how*). He managed to come up with a device that would lift water over any distance with the absolute minimum input of energy, so much so that “he” broke another golden rule, that of the maximum lift ability, (with is 9.87 meters to one) (9.87:1m). Looking at the drawing above, each turn of the screw (apex to apex) has the same volume, and the water contain between “apex to apex” has the same mass [and] volume; As the screw turns, the “apex’s” move left to right, and up the incline towards the exit; This is an infinite process resulting in “lift” (of) water over the length of the screw, (now how cool is that [!]).

We now have a basic design, (a screw of a given length) that will move a “fluid” (water) from point “A” to point “B” using the minimum amount of input energy; But still no vacuum [!]. So how do “We” use Archimedes’ “Screw” to make a vacuum? Look closer [...], and closer still,

look at the “apex to apex” and “You” will see that each and every turn is identical in shape, form and function. To now bring Mr. Archimedes’ (Screw) into 21st Century, allows for some clever “Mathematics, Mechanics, Engineering, Physics, Hydro-Dynamics, Nuclear Physics and Chemistry” to be used, (*I never said it was that simple*[!]). Looking at the original drawing of Mr. Archimedes; It is a “TUBE”, a closed cylinder with a screw inside; If we keep the tube, and change the screw; The change is with the angle of the “pitch” between “apex to apex”; “We” can do something that Mr. Archimedes never thought possible. Let’s break a few golden rules, the same as Mr. Archimedes; Let’s trash the 9.87:1 lift rule, and at the same time we’ll use the 9.87:1 against water itself. Let’s take the tube, and take the screw, but we will change the construct of the screw, we will make the first THREE turns of the screw identical, (the same as Mr. Archimedes), but each consecutive turn of the screw, we will open the point to point position of the “apex to apex” by a very small amount; the result is; A point of volume NUTRALITY between turns one and two, and between two and three; the pressure on either side of turn two is identical, the pressure on the left side of turn one is neutral to the air pressure around it, and we will address that condition as “STP” Standard temperature and Pressure. The distance between turn THREE and FOUR is wider by the value of 1.68:1 (The golden ratio), the distance between turn FOUR and FIVE is also greater by the value of 1.68:1 and the same for Five and Six, (7 and 8, 8 and 9, 9 and 10 &) so on over the whole length of the screw.

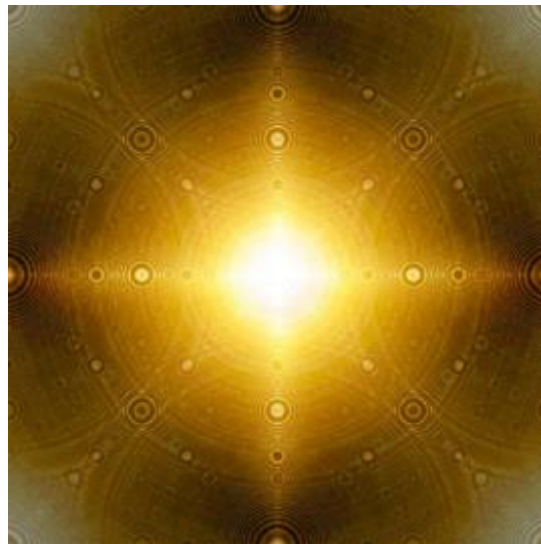

Water is NOT compressible, but it is expandable; ICE is water expanded, it’s volume and mass by weight is 0.9 of itself; and STEAM is water expanded using heat, and finally Hydrogen and Oxygen as gases are nothing more than “EXPANDED” water.

Our screw now starts at a ratio of 1:1 (normalized STP, Volume and Mass), and ends up, (at the other end of the tube in a VACUUM [!]) as shown below:

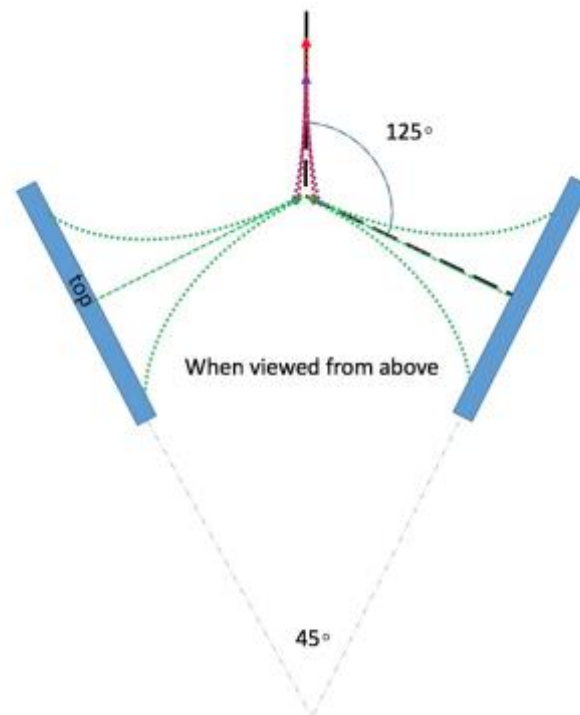

Viewing from left to right, (along the screw), the volume between the blades increases by a very small amount (1.68:1), the blade is enclosed within a water tight, gas tight tube, the pressure on the right hand side of the blade is NEGATIVE to the left, and the left will always want to try and EQUALIZE its own pressure, (Hydro-Dynamics), as the blade turns the volume between the blades increases but the volume of the water remains the same, the water MUST expand to fill the volume (Physics) and in doing so, the H₂O is expanded into the free space between the blades (Chemistry and Physics), this process continues along the length of the screw until a point in time (along the length of the screw) where the mass and volume is 9.87:1 of itself, and the next turn [?] Hey presto, a VACUUM, and the next turn [...?]; here “We” enter the realms of “Fluidic Space”, the space between the atom of the water molecules, (Nuclear Physics and Quantum Chemistry). At this point H₂O, its bonds are stretched to the absolute maximum within the fluidic space of the vacuum within the screw; [And] (...); what happens in the next turn of the screw [?]; The intrinsic ionic bonds between Hydrogen and Oxygen can no longer be sustained, thus break apart or collapse.

In doing so, (breaking apart) a noise will be heard, (some refer to the sound as cavitation) but not in this case, the blade does not CAVITATE, the sound is the COLLAPSE of the ionic bond; think of it like a rubber band stretched to its absolute maximum, stretch it a little more and it will snap, the sound of the snap is the “elastic” recoil of the inertia stored within the rubber; [And] this is the same as what is going on with Hydrogen and Oxygen, the snap or sound is the ionic bond collapsing. The next cool fact is that the sound of an ionic collapse is unique across time and space, EVERY atom, every molecule, every construct in space and time are held together with the same ionic bonds. Hydrogen has the value of ONE, and the sound that is heard is the resonance frequency of the collapse of the Hydrogen bond, the bond in an Electromagnetic force bound by its own inertia state, the collapse is a frequency within the E.M spectrum and resonates upon the Earth own EM wave, (just like all telecommunicates), the sound is carried out into space and beyond our planet and star, it is carried on the universal E.M wave that has existed throughout all of time and across all of space. The collapse of the Hydrogen ionic bond is a UNIVERSAL frequency, and to take a closer look at what the collapse looks like [?]:

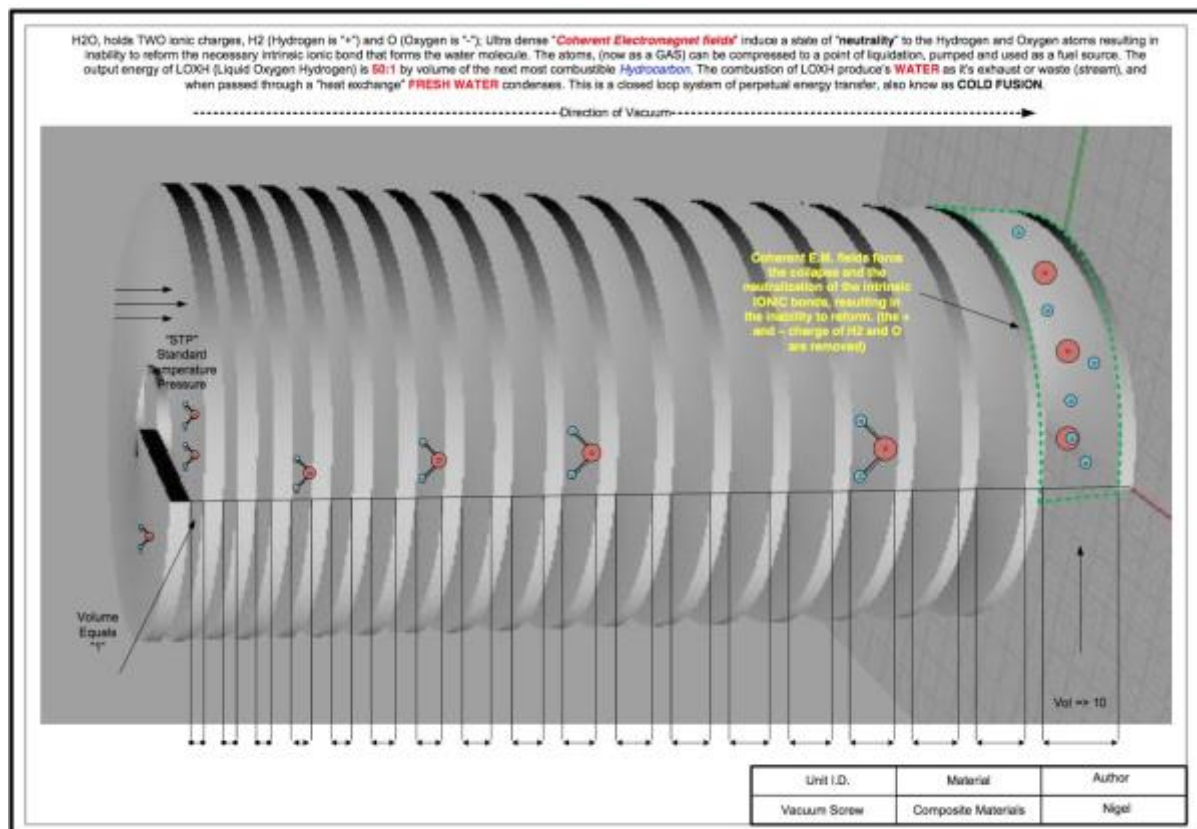

This is an example of the effect of a Hydrogen atom collapsing, and the “energy” being released, (the first part of a lot of energy from nothing (a vacuum)); But it’s no good just collapsing the ionic bonds, “We” need to be able to access the Hydrogen and the Oxygen in the gaseous form. Having separated the two gases from its composite molecule (H₂O), We

need to avoid the possibility of the two re-constituting themselves back into water. This is done by neutralizing the ionic particle charge at the sub-atomic level (Quantum Chemistry, Particle Physics). Remember this [?]:

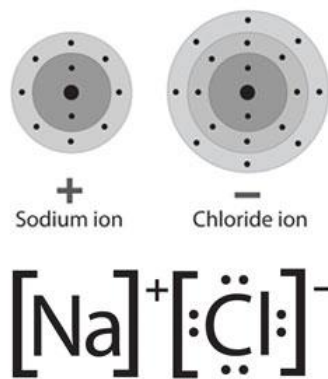

The EMAC SIP of a PIN. The inertia state of the image above is an ultra-dense highly coherent E.M. beam that “NUTRALIZES” the ionic charge associated with Hydrogen, in layman’s terms it “Kill’s it dead”, the Hydrogen becomes an atom with NO charge, with no charge it is free to remain in its gaseous form; The Oxygen, likewise remains a free gas; and putting EMAC SIP and PIN within a vacuum result’s in:

To the right of the image; it can be seen a “GREEN” sector, this is the placement of the EMACS SIP & PIN, this is the point of neutrality within the fluidic space of the Archimedean Vacuum (AV). The Hydrogen and Oxygen (ionic bonds), having been neutralized, now need to be extracted (as gas’s) for onward use as a dedicated fuel source, a fuel source that has an output energy ratio that is 50 times greater than the nearest Hydrocarbon, (Chemistry), that’s 50:1 by volume of (Hydrogen and Oxygen) to that of “Petrol, Diesel, Natural Gas, Propane, Butane or other Hydrocarbons”; [And], the by-product of “re-combusted” Hydrogen and Oxygen is good old fashioned water (H₂O), the water that is produced is pure and un-adulterated, no minerals, no chemicals and no pollutants what so ever, just pure clean drinking water.

The genius and the fun does not stop there [...]; Fresh water by planetary volume is 3%; that is 3% of ALL water on this planet is non “Salted”; the remainder, 97% by planetary volume is SEAWATER, SALTWATER non-drinkable water; but can the saltwater be used in the same way using the same process [?].

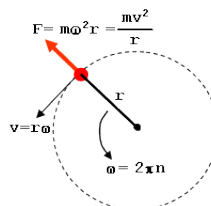

Saltwater is [H₂O (+) NaCl] (or) Hydrogen and Oxygen (+) Sodium and Chlorine, the Sodium and Chlorine combine, (once again) at the atomic level to produce a crystalline molecule known as Sodium Chloride; the Chloride is a “single” atom of Chlorine bonded to Sodium:

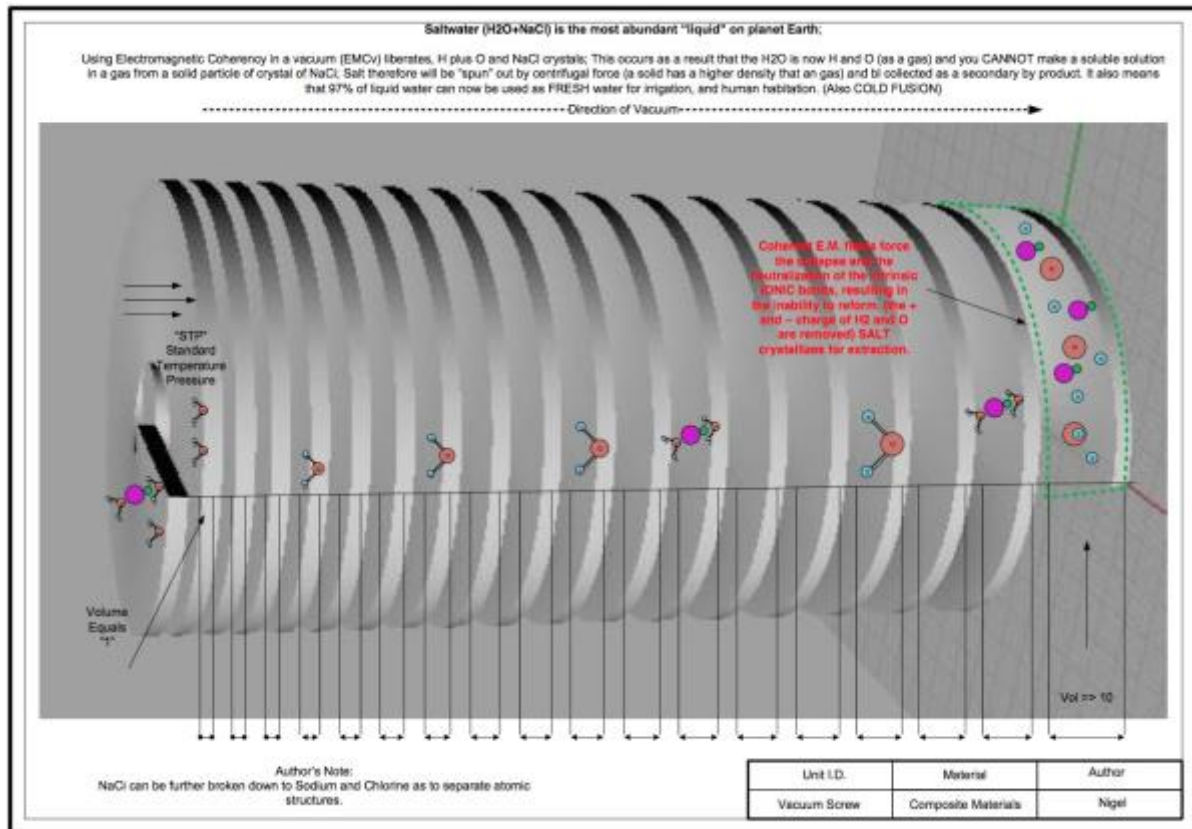

The complexity of the ion transfer is simple, ONE “positive” (+) sodium ion bonds to the chlorine ion resulting in an “octal” crystalline structure we call SALT; Salt is highly soluble in H₂O; not just soluble; the Na⁽⁺⁾ charge and the Cl⁽⁻⁾ charge merge with the H⁽⁺⁾ and O⁽⁻⁾ charges making the salt solution we refer to as “seawater”.

Once again, H₂O (their ionic bond can be removed), the resultant part is SALT, Sodium is a metal and Chlorine is a gas that are bonded together; The AV (Archimedean Vacuum) will “crack” the H₂O shell and liberate gases leaving the crystalline structure of salt untouched.

Gases (Hydrogen and Oxygen) are less dense than “Water” or “Salt”, Salt being the densest within this reaction. As the AV turn’s it creates its own centrifugal force resulting is the “SALT” being spun out from the residual water and away from the gases of Hydrogen and Oxygen.

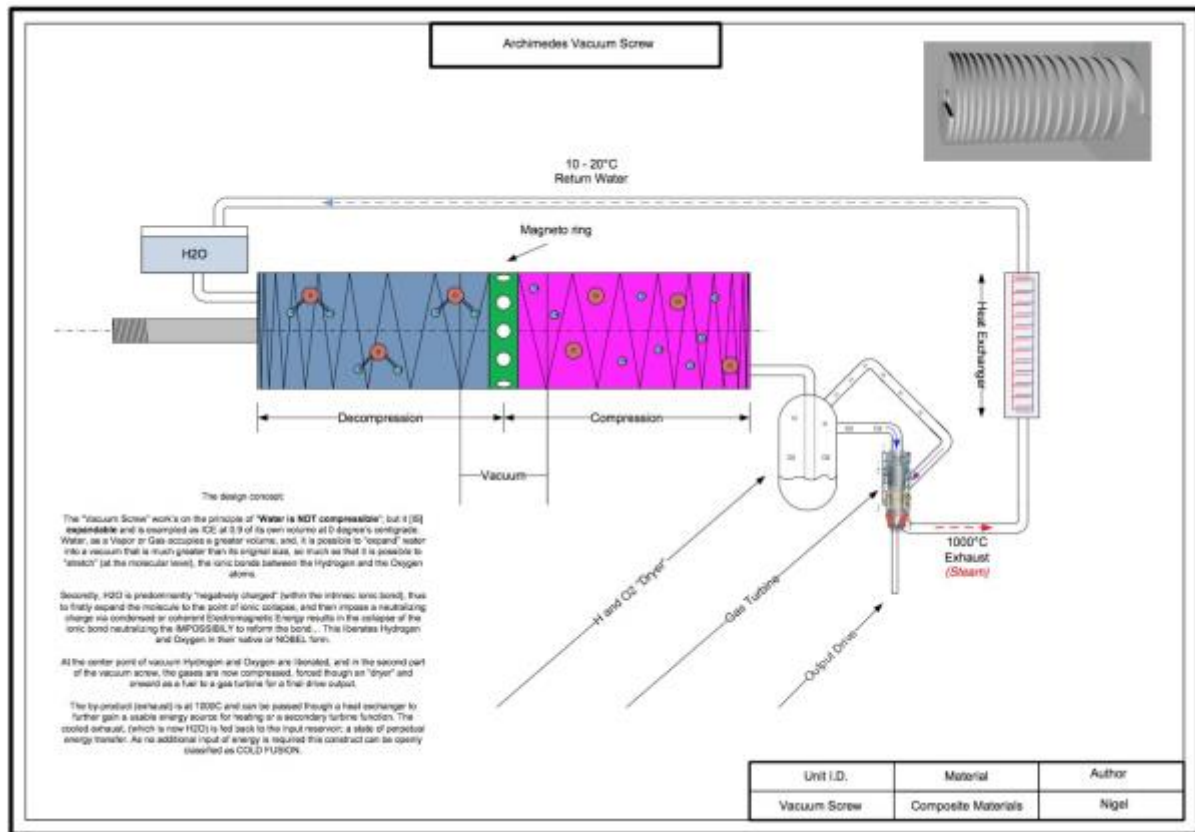

The above image shows an AV (Archimedean Vacuum) and an EMAC's SIP and PIN functioning with a centrifugal force [$f = mw^2r = mw^2/r$] where the result is the free liberation of Hydrogen and Oxygen, and the free liberation of crystalline salt, and is known as the AVCS process. Archimedean Vacuum Centrifugal Separation process. A simple use of Hydrodynamics, Physics, Chemistry, Mathematics, and Engineering spruced up or spiced up with a little common sense and know how. What could be more simple than that?☺

Having obtained, and liberated Hydrogen and Oxygen, separated salt from water; it is now time to extract the gases as a fuel. To do this we have to give the water the "bends", or Nitrogen Narcosis; well not Nitrogen but "Hydrogen / Oxygen" narcosis.

What the hell is "Hydrogen / Oxygen Narcosis" [?]; Well; When a driver goes deep, below 2 atmospheres of ambient air pressure, Nitrogen accumulates in the blood (under pressure), if the diver comes to the surface too fast the Nitrogen forms bubbles in the blood and that is potentially lethal. So, in our AV device we have free liberated Hydrogen and Oxygen (at a negative pressure); if we now add a VERY SMALL amount of water to the AV, (at the mid-point) of the process the internal volume is now greater than the originating volume; reversing the AV from a negative pressure to a positive or ambient pressure condenses the Hydrogen and Oxygen into the water. When the mixture of [H₂O + HH + O] is release to STP the water will fizz like champagne, (bubbles) of Hydrogen and Oxygen; We just gave water (H₂O) Hydroxy Narcosis. The gases bubble off freely for collection as a fuel; now how sweet, how cool is that [?] Champagne Water (with a fizz).

Putting it all together as a process result in the following drawing:

To break down the drawing into its relevant parts:

1. There is a reservoir of water (H₂O), that's the raw fuel source.
2. The AV process is marked in BLUE
3. The EMAC's SIP and PIN is marked in GREEN
4. The Hydroxy Narcosis is marked in PINK
5. The Hydrogen and Oxygen are collected to a storage tank.
6. Hydrogen is lighter than Oxygen and is separated as two gases.
7. The two gases are feed to a gas turbine (Oxygen is compressed (heated))
8. The Hydrogen is added under pressure as the combustion agent.
9. Oxygen is the oxidizer for the combustion agent.
10. The gas turbine runs at 45,000 RPM.
11. Output is motion (rotational), (heat) and or "Thrust".
12. The exhaust is 1000° Centigrade or super-heated steam.
13. The super-heated steam is passed through a heat-exchanger (secondary power source)
14. The super-heated steam re-condenses to water at 10 to 20° Centigrade.
15. The cool water returns to the reservoir at point one.

This is a perpetual state of energy transfer from approximately 100 liters of water; the same one liters are used time and time again; a closed system that produces FIFTY times more power than any Hydrocarbon, and the same 100 liters will last longer than the gas turbine itself.

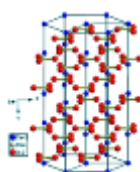

Chapter TWO: Calcium Vs a Magnet (The taste of success).

Chapter one summarized many functions of a magnet, many, that until now have been kept locked away as a “closely guarded secret” from mankind, (*Oh god forbid if mankind realized how easy it was to make power and water*). The result of chapter one was [Dollars and Oil] being utterly belittled by the humble magnet. Also discussed was the “hidden power”, (*power that cannot be seen with the naked eye*), power that can do so many things with ease, but mankind has been forced to adopt the “Brute Force” approach. The brute force comes from the reliance on an equation. Not playing “Devil’s Advocate” (nor) “War Monger” (or) “Pacifist” for that matter, and having need to inform [ALL] of the “Big Con” (or) shall we refer to the big con as a falsity in the truth, a falsity in the truth is a lie and there is no two ways about it.

What was the lie (or) falsity? Simple, someone told YOU that if you bash two things together hard enough, they will fuse together; [And], to prove a point the “someone” decided to show to the world the so-called power of smashing things together, they done so with a thing called the “Atom Bomb”. Now “We” all know the outcome to that [!], not only the devastation, but the tens of thousands of years of pain and suffering that follows. The radiation poisoning that poisons everything, humans, wildlife, aquatic life and vegetation, NOTHING is left untouched. The devastation is “Ultimate”, nothing is left standing or functional, if it’s not obliterated by the atomic blast, it is destroyed by the following “E.M.P.” (Electromagnetic pulse) that accompanies all Atomic reactions. The fall out of “radio-active” dust and particles infect everything for hundreds if not thousands of kilometers surrounding the blast site; I have no need to point a finger in the general direction of who done that; They happily told the world “Look we are mad scientist”, (Hiroshima, Nagasaki, Christmas Island, Mura Towa Atoll, do I need to show more [?]).

Chapter One proved the opposite of the above; You don’t need to smash things together to generate great power, you just need to seduce them, (give them a little suck) and you can have all of the energy you need; but sometimes “energy” in not the overall goal, sometimes “We” just need a little help in cleaning something up. Let’s take another common day problem, that of Calcium Carbonate or $[Ca]^{2+} [CO_3]^{2-}$, and its common name of “Lime Scale”, that horrible off white colored crystal that clogs and blocks every pipe and water system on this planet. It cost (in rectification) or in its (temporary removal) is billions and billions of \$\$\$, that billions wasted on something that is going to come back in the not too distant future; and if you don’t do something about it, it will destroy the system that it has infected (just like a cancer). Lime scale infects more than 95% of all freshwater supplies on the planet, and infects 100% of all devices connected to that 95% of water supply; Now that is a financial burden that “We” could all do without.

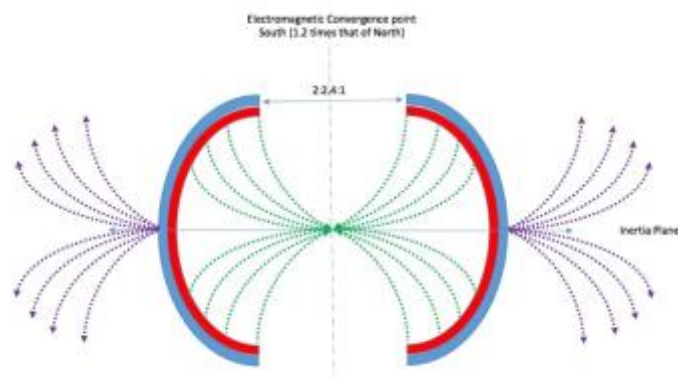

Once again, “Enter stage left” Mr. Magneto, (and its hidden powers). This time we’ll use just the E.M. energy within an EMAC’s SIP and PIN, and we will NOT use a vacuum. We will change the “configuration” of the (NS SN) sequence to match the ionic structure of Calcium within Calcium Carbonate. Looking closely (within the molecule itself) as shown below:

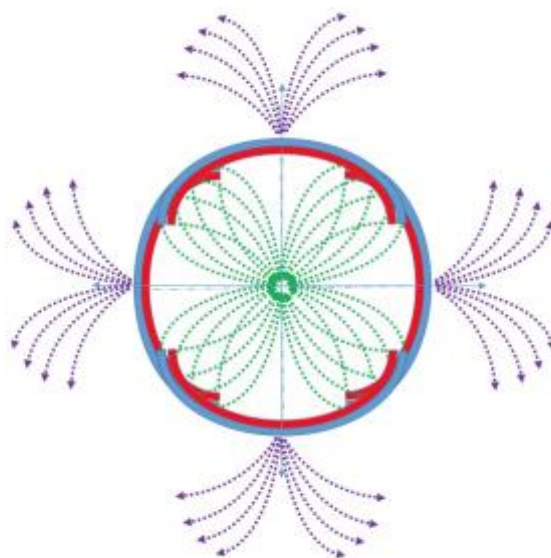

It can be seen that the “Calcium”, the “Carbon” and the “Oxygen” join together within the molecule to form a crystalline structure; this structure is “Octal-rhombic (+)” in shape, it has hard sharp edges that holds a positive charge, that positive charge is attracted to all negatively charges surfaces, like the inside of pipe work of a dish-washer, a washing-machine, shower-heads, kettles, steam-irons and more. It sticks to the surfaces and clogs every surface it comes into contact with. It does so because of its molecular structure and its charge. Thus, by removing the ionic charge forces the crystalline structure to collapse. The resultant output is “still” Calcium, it’s still “Carbon” and of course it’s still “Oxygen”; But the crystalline lattice is no longer there to CLOG up everything; [And], it would be right to say:

“With no supporting crystalline structure, calcium carbonate collapses to a slurry and is readily processed by the body which harvests the now freely available Calcium, Carbon and Oxygen”

WOW [!]; It’s as simple as that, it is so simple that a small device, (with no moving parts) can be fabricated to deal with lime-scale once and for all; it’s so simple that once fitted to a water supply “you” just forget it and let it do its thing, (that is strip calcium carbonate from water). This process does have a name, it’s called “Electromagnetic Molecular **R**ecomposition”, (to take a molecule in one form and reconstitute into another form);

Remember this [?], the convergence of E.M. to a single point which “We” used as a part process to make “Champagne Water” ☺; Well [...] if you take two of them at 90° to itself you get this:

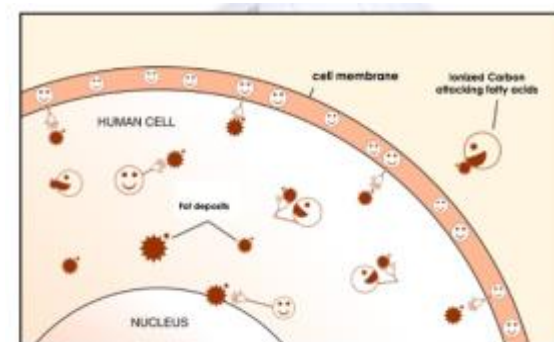

And to think of the “blue” outer surface as the inside of a pipe, (Your dish-washer, washing-machine, steam-iron etc.); it can be seen that the EMAC’s SIP and PIN creates a complex “clover-leaf” pattern (at the atomic level) inside the pipe. As all water, MUST pass through the EMAC’s field, all water becomes exposed to the effect the ultra-dense magnetic field; therefore, Calcium Carbonate, (lime scale) is also exposed. The crystalline substrate (the building block of the crystal) is ionically destroyed, resulting in the liberation of Calcium, Carbon and Oxygen. The human body is a very clever thing, it can process just about anything, (save for poison’s), and in so far, it would be right to say; *“The body utilizes the Calcium to enhance the skeletal structure (Bones, Teeth), Calcium is also processed for Nail, Hair and Skin resulting in Stronger Bones, Healthier teeth, Tougher nails, Silky smooth manageable, tangle free hair, and a clear and obvious healthier looking and feeling skin; in addition to the maximum re-utilization of the Calcium”*. Expressing as a One, Two, Three, (1,2,3) type process, the result is:

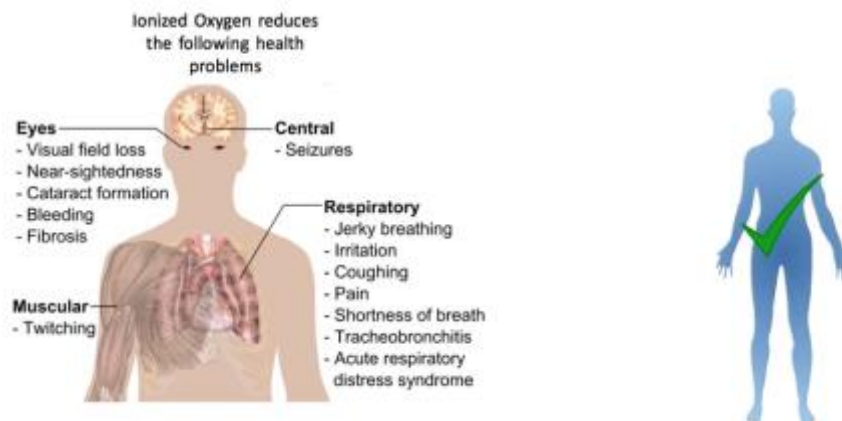

One, take some calcium carbonate; Two, expose to EMAC’s and collapse the crystalline substrate; Three, allow the body to use the free Calcium, Carbon and Oxygen.

Calcium, and its “bodily function” has been proven above; but what of Carbon and Oxygen [?]. Carbon is a “*metabolic stabilizer*” forming the fundamental component within ANY “**Carbo-Hydrate**” group, (*Cereals, Wheat Crops, Root Vegetables and Fruit*); with higher concentrations of (FREE) carbon IONS within the body, the ionized carbon now attacks the “fatty acids” that form between the bodies muscle layers and epidermis (skin) resulting in significant weight lost. There is absolutely **NO** possibly for the weight loss process to cause any harm to the body, as when there are **no** surplus fatty acids, the carbon is “ejected” from the body by normal toiletry functions:

Moving forward; With no “Calcium” or “Carbon” or “Calcium Carbonate” build ups within the body, the **Heart**, the **Liver**, the **Kidneys**, other vital organs (and) **Teeth, Hair, Bones and Skin**; ALL without exception flourish with the **absence** of **Crystalline Calcium Carbonate**; leaving an **abundance of Oxygen ions** for the body to absorb. We know that “Oxygen” is the life force of the body, without we “DIE”, with it we “LIVE”, the more oxygen we get the better

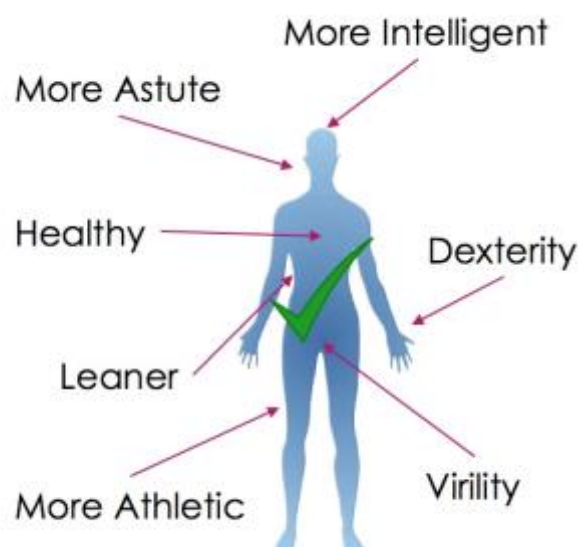

the body functions, the better the quality of oxygen the better the quality of life we have; and pointing out just a few benefits of oxygen:

All lifeforms, (not just humans) benefit from oxygen, though in the case of humans, each of us have at some time in our lives, or will in our future lives be effected by one or more of the above conditions. When broken down into four groups:

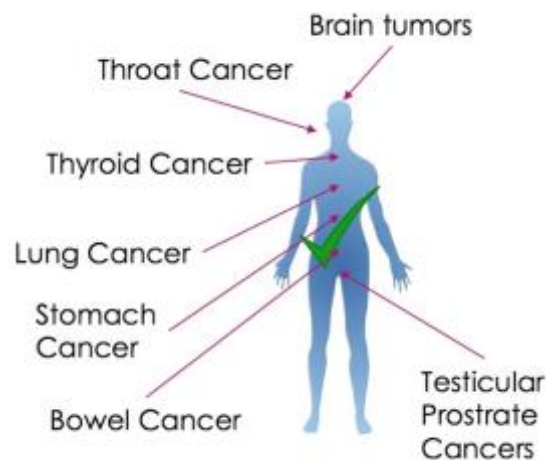

1. Eyes (Visual impairment)
2. Central nervous system (higher brain functions)
3. Muscular and cardio vascular functions
4. Respiratory functions

It can be clearly seen, “more Oxygen is GOOD for you”. Oxygen is the body’s natural oxidizing agent or the bodies combustion engine. More “FREE oxygen ions”; Means **faster** body response, walk faster, run faster, jump higher, be more alert and feel awake, feel invigorated. Oxygen is used in every process of the body, right down to the “construction of DNA”; Free Oxygen Ions will accelerate DNA construction, body self-repair, mental agility, scientific reasoning and judgement, euphoria and enablement; all come from Oxygen:

The benefits of oxygen do not stop there, nor does the body’s ailments; enter stage right Mr. “C”, the big “C” that of cancer; each and every person dreads the day when a doctor say’s to you, “I’m afraid you have cancer of the [...]”; the list of cancers that plague mankind is endless. But it does not have to be this way. Oxygen ions are the only known ions that readily attack

and KILL cancer. Ask any doctor, professor or cancer specialist what the power of oxygen is against any cancer cell? And the answer will be “**Total destruction of the Mutated Cancer Cells Protective coating** resulting in the death of the cancer cell”. With the abundance of free Oxygen ions (IONICALLY NEGATIVELY CHARGED), are attracted to the cancer protein shell, the IONIC CHARGE of the oxygen ion is **discharged** into the cancer cell, **killing** its ability to form its protein cell; with **no protection** it is now visible to the body’s natural defense mechanism; that of the **White Cell**, the white cell now attacks the cancer cell that is **no long protected**, and is destroyed, ridding the body of cancer, (just a glass of IONIZED water) ~ several times a day is all that is needed. We need to put this into perspective, this is not a magic bullet that will bring a person back from death’s door; when cancer is rife within a body, alas, too much damage may have already been caused; But for the isolation of the onset of a cancer, postponement of cancer, ionized “Oxygenated” water is a far better cure than chemotherapy, or radiation treatment, (radiation kills that’s been proven above).

Each of the itemized types of cancer listed above can be treated by this process, without the need of chemical treatment and without the need of radiation, and definitely without the need of invasive surgery. I’ve mentioned earlier; “**This is the point where my life is now put at risk**”; that was from the OIL BARRON’s and the BANK’s; the same exists from the medical and chemical industry who profit from the pain and suffering of humanity.

The process as described above, Calcium, Carbon and Oxygen ion detachment not only benefits humans but also benefits all life on the planet; that is all humanoid life forms, all animal life forms, all aquatic lifeforms and of course all plant life. A magnet (used in the right way) will benefit this planet and all life upon it.

Crops grow faster producing an abundance of fruit, livestock breed healthier.

Rivers, streams, and wetlands flourish in the abundance of IONZED Oxygen, Carbon, (and in the case of other magneto combinations) Ionized minerals: Insects', Amphibians, Aquatic life all flourish. The abundance of free oxygen ions in the blood also as an insect propellant, thus no mosquito bites or accidental stings; insects do not like the excess charge it damages their navigation and sensory systems; a perfect and natural additive to the bodies defense mechanism. No need for any "chemical" repellent which is a big plus for the body and the environment.

Having discussed the "human" benefits along with [ALL] life benefits, it necessary to highlight the domestic benefits. Indicated in the previous pages, *"it is so simple that a small device, (with no moving parts) can be fabricated to deal with lime-scale once and for all..."* result's in the fact that someone will say OK show me, and as if by magic, I'll respond "Hey Presto, Abracadabra Allakazam, here's one I built this morning":

It is a fully functional device, not a toy, not a fake, a genuine 100% real McCoy "Electromagnetic Molecular **R**ecomposition" (E.M.R.) device. This device was neither designed, built or constructed by NASA or CERN, or any other acclaimed group of technical wizards, it was designed and built in a small office in the center of Zagreb, Croatia by a small dedicated team of Engineer's whose passion, drive and tenacity pushed them to the very limits. The device is tested, certified "fit for purpose"; That purpose is "Fit and Forget". This single device is functioning proof of all that is written here.

Chapter Three: Waves and Spark's "Let there be light".

You all [use] is some form another "electricity", plug something into a wall socket and the electricity that is used is known as AC, (Alternating Current), if you are in Europe then the AC voltage is 220 ~ 240 Volts; the "~" symbol is the alternating bit, alternating as in cycling up and down like a wave. It, (the Electricity) oscillates as 60 times a second; this oscillation has a name, it is called Hertz and is symbolized as Hz; So, the electricity (at the wall socket) is 220 ~240 Volts AC at 60Hz. Let us view something that you plug into a wall socket to use electricity, let's use your flat screen TV; The TV is basically a jumped-up computer, with a few integrated circuits and an OLED (Organic Light Emitting Diode); [ALL] of the internal circuits run at 4.5 to 12 Volts D.C. (Direct current) – (no oscillation). So, You, pay for 220 volts and only use 12 volts (or) $1/20^{\text{th}}$ of the energy, the rest you pour down the "metaphorical drain" as heat. Putting a cost to that, if one unit of electricity was to cost 1.00 Euros and you only use $1/20^{\text{th}}$; Doing the number's: 100 (cents) a Euro divided by 20 equals 5(cents); Therefore, YOU throw away 95 cents for every unit of electricity you pay for. Here's a good question, why does your house not have a permanent 4.5 and 12 volts DC socket [?], if you did have such a socket, one unit of energy costing 1.00 Euros would last TWENTY times longer, and given that 95 percent of all of your devices in your home are all DC at 4.5 to 12 volts, means that the TOTAL cost of all of your energy consumption would only be $1/20^{\text{th}}$ of the cost. So, if you have a peak winter bill (for electricity) of say 200 Euros for THREE months, $1/20^{\text{th}}$ of that is a mere 10 Euro's; So, who is screwing who? Take a look at the image below, it is not fake, it was witnessed by several high raking Politian's, and two civil engineers and three separate professors from three different countries.

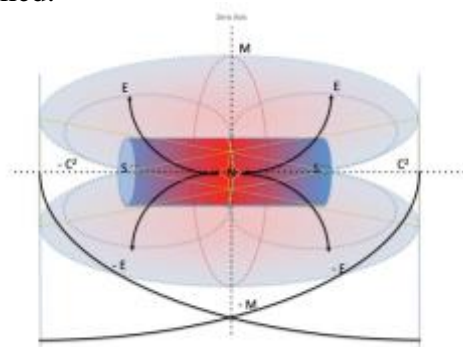

The cool thing about the picture above, is that it was produced without ANY electrical connection what so ever! In the background of the picture, (to the right of MY hand) can be seen a silver colored mechanism. The mechanism is called an "electromagnetic Intensifier (or) amplifier" (EMI / EMA) for short. This section is going to describe in detail how it works, why it works and how to build one. Remember the line "**This is the point where my life is now put at risk**" Chapter one the line is directed towards the Oil and the Banks, in section two the line is directed towards the Chemical and medical industries', and this section, the threat comes for the power generation (electricity companies) and those who "make" money from "spinning magnets in a circle [!].

Now that I have established the EASE of making power, the time is NOW to inform the world on how, and why and where it all comes from. I could sit and write another book on the how, and another on the why and of course another on the where; But I'll condense as much as I can.

The where:

Our universe is constructed of two parts, Electromagnetic Energy (EM) and Inertia (I). They are separate, but directly connected. Taking EM energy first and sub-dividing it into its two components parts which we will refer to as a positive and a negative condition or a (+ and a -). When working on a scale much larger than Earth, that of the universe, the EM division of plus and minus is much simpler to understand. Many have referred to EM energy wrongly as dark matter and dark energy, (a bit silly) when it's been staring man in the face for 13.7 billion years, (talk about too slow to catch a cold); The dark matter is the positive condition and dark energy is the negative. By the nature of the term "matter" and "energy" clearly suggests TWO forces are at work, but how do they interact. Let's drop the "dark" bit and refer to them as "Universal" (matter [and] energy); the bit in the universe that has boggled scientists (the so called clever ones) for so long. We, (You), know it exists, it is there, it is all around but you can't touch it or see it; just like the wind, you can't see it but you can feel it so it must be there. Therefore, EM energy is there and you can feel it; but what of inertia? Inertia is the "stored" energy that is in a constant state of imbalance between the two EM forces; and can be better expressed and understood as the intrinsic forces that are applied to the humble magnet.

Bringing the universe down to size and placing it on your desktop is the easy bit; As we will represent everything in the universe as a hand full of magnets. I'm not going to dissect a magnet any more than I have done so far, but suffice to say the north and the south will be treated as plus and minus; In the same way, as Universal Electromagnetic Energy has a plus and a minus, (both are the same). We know a magnet is not $\frac{1}{2}$ and $\frac{1}{2}$ but $\frac{2}{5}$ th and $\frac{3}{5}$ of itself (or) 2:2.4:1 of itself, (a permeant state of imbalance [Inertia]). That makes the magnet a perfect replication of the universe, (plus, minus and inertia). Take two magnets, place them on a table top, far enough apart, and they will sit there from now until the end of time. The plus and minus forces remain stable (or) weak enough) not to interact with each other; but the moment two magnets come close enough, one of two things will happen; They will either be repelled or they will be attracted, (pulled towards each other or pushed away from each other). This force, (many refer to it as their magnetic attraction state), is universal electromagnetic energy and inertia interaction in play. The distance between two magnets where their force remain in equilibrium is known as the MSSR (Minimum Self Seduction Range); the MSSR forms two intersecting curves upon themselves with a midpoint of zero; Strangely enough the zero in this instance is in the maximum forces being applied.

The drawing above shows the MSSR in conjunction with inertia states. A simple set of two opposing forces. Thus, EM Energy and Inertia is everywhere, you just got to know where to find it.

The how:

Having grasped that simple bit of information, the “how” bit becomes easier; as in, how do two magnets attract or repel? Looking at the 2:2.4:1 ratio shows an imbalance in favor of south, (that’s the 2.4). So, when two magnets fail the MSSR one of two interactive forces comes into play, either attraction or repulsion. Attraction, now how does that work [?], and for the really clever mathematical gurus out there, it is the mathematical addition process of a plus and a minus. To do a simple calculation of:

“What is plus 2 minus, minus 2.4 [?]”, and the answer is; wait for it [!], come on genius’s, it’s minus 0.4. Wow, that’s all there is to it. The imbalance in a magnet comes down to 0.4 of itself in favor of SOUTH. That is why, when two magnets fail the MSSR they either move towards the stronger South, or move away from TWO south condition’s. That’s the how.

And, the Why:

Well this section started in the universe, (all and everything), and ended up on a desktop of two magnets, but the “why” is smaller still. To find the “WHY” we must go fishing ☺. Well not fishing in a river, lake or steam, (with a rod and some bait), but finishing with magnets. Within every magnetic condition, two forces are in a state of constant imbalance and cause the internal inertia state to go into a spin, a spin is a rotational action in a given direction, be it clockwise or anti-clockwise, both are still rotational and both are still a spin. At the atomic level, the combined positive charge of the atomic shell of an atom is spinning in one direction, and the negative charge of an opposing atomic shell is spinning in the same direction but has a force 0.4 times great than the positive. WOW that was hard! This creates one of two conditions, the two atomic nuclear shells either attract (form a molecule) or repel (form a stable atom); it is all that can happen. There is no magic third or fourth part to the equation, it is a balance of two in one of two states at a ratio of 2:2.4:1 of itself; and scaling up (from the smallest part of an atom (it’s electron (positive or negative)), its neutron and its proton produces a single charge to any atomic structure (either positive or negative), continue to scale upwards to a molecule, to a cluster of molecules to an object of microscopic proportions (still positive or negative), upwards a visible object such as a magnet. Holding things there, the humble magnet, a device of with unsurmountable ability. It is the ONLY natural object that can sustain both positive and negative forces at the same time, the next object that does that is the Earth itself.

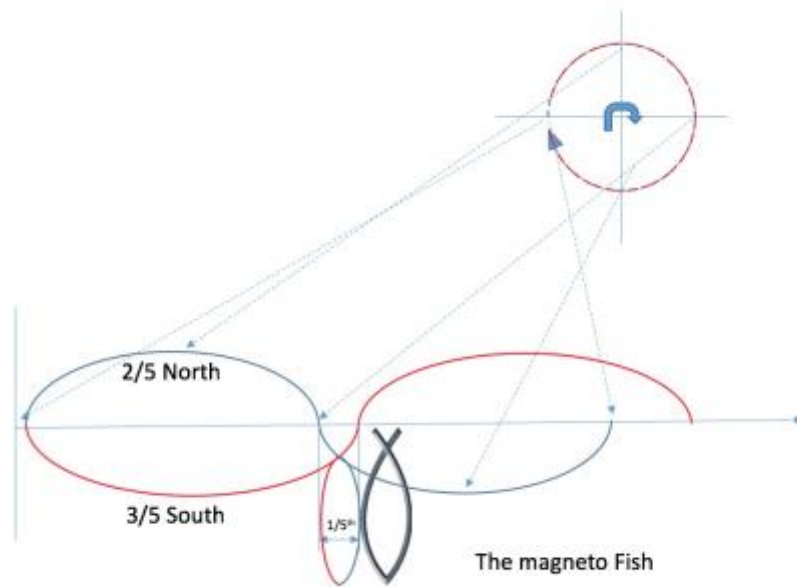

The Spin, (and) more of the Why:

Remember we are “fishing”; enter stage left the “magneto fish”, a visible re-representation of an electromagnet motion force in a given direction within the body of a magnetic object derived from the internal construct of two opposing forces of negative and positive at a ratio of 2:2.4:1.

Now, don’t tell me You have not seen this symbol [?]; some refer to the symbol as the “Christian fish”, (or) has the “Christian faith” withheld from mankind its knowledge of

magnetic inertia forces for at least 2016 years and more. [Naughty, Naughty], I thought the “Christian faith” and those at the top were the good guy’s; don’t look that way anymore. Let’s not kick someone while their down, (that comes later); to now view the fish from a different angle and perspective; that of a time event with motion (inertia) or spin:

The above represents a time event of the inertia force of EM motion with a displacement of 2:2.4:1 of itself, the blue represents the positive and the red the negative; when the two are overlaid on each other the FISH symbol is produced, and to add a little color:

It can be seen that the “tail-end” of the blue is to the north and the tail end of the red is to the south, with a displacement of 2:2.4:1 of itself. And, stacking magnets (of allowing them to come together) results in:

This is an infinitive (OPEN-ENED) condition; it can also be expressed as “ $E=mc^2$ ” it goes on forever and nothing comes from it (but sticking two or more magnets together). That’s what people wanted you to think and believe: “Magnets do shit, but through enough energy at them and they will make a useful thing called electricity [!]”. Now who is conning who? It’s not me, I’m only the messenger, the teacher, the professor, the guru, a MAN.

So, we have a spin (within a magnet), a spin within a molecule, a spin within an atom, and spin within the very construct of the smallest part of any atomic construct. The spin seems to be an endless condition of “nothingness” as Mr. “E” quiet **WRONGLY** suggested: $E=mc^2$!

So, the where, the how and the why is there; now to put them together and have some fun for mankind and point a few fingers towards those who NEVER wanted you know this. Magnets, when placed into a forced attraction create nothing but itself amplified by itself, ($E=mc^2$); but when two or more are placed in an attraction state of less than 1/5 of itself the inertia state MUST move in accordance with the MSSR and the EM state of plus and minus of the inertia state. To represent this as a simple graphic let's take the two fish above and change how they are placed into attraction.

The magneto inertia condition of attraction remains valid, but now the inertia state becomes accumulative upon itself, a state of perpetual inertia motion at the electromagnetic atomic level; that means the ion transfer between one atomic structure to the next, and the next is accelerated at a rate on 1/5 of its own inertia state; also known as EMIA (electromagnetic Inertia acceleration), it is a condition that is infinitive upon itself; it means that the two magnets being configured for two polar condition in an opposing by asymmetric and orthogonal condition create internal motion at the atomic level; this is best represented as “propeller axial motion” or PAM:

It can be seen that one “ion” from one magnetic field is “seduced” to the next magnetic field, through itself and re-seduced on the opposing axis that is orthogonal to itself forming an asymmetric loop about its own common axis.

Why stop at two [?] fish, what happens with three [?]:

Again, it can be seen that a continuous loop of ion exchange exists, this from is known as EMMOTIE [Electromagnetic motion (of) tri-agonal inertia energy] and can be re-symbolized as:

Once again, it has to be asked, who is conning who [?]; The process of accumulation of magnetic inertia condition does not stop at three or four, or five, six, seven or more and gets very damming towards others as more accumulative inertia states are shown. It seems to be that the bigger the company the greater the magneto combination as shown below:

Having pointed a few fingers at other's and asking openly, "Why have you hidden from mankind the ability to make free energy [?]" The images above is in no way limited to the few shown; in fact, the list is VERY BIG; but I'm not here to say [Naughty, Naughty], I've done that, I'm here to upset the apple cart once and for all. Every one of the above conditions relies on the same fundamental condition of $E=mc^2$ (working in opposition to itself) each producing an infinite amount of power, energy and inertia. But, and it not a big butt, just a "but"; And to rebut and refute $E=mc^2$ has to be the goal of mankind; that of, the ability to make energy for free. Each and every image and magneto condition above relies upon the multiple of two or more in a given seductive condition of an axial condition of an opposing condition; each will produce INIFITE motion, power and energy; but to do it with ONE MAGNET, that is the ultimate goal, the goal of making $E=mc^2$ an over complicated and defunct functional equation of nothingness; that result in the equation of $N1=\infty$

So, you are going to ask how, why and where?

With a smile before you I will show you all and I will remove the lie of power before mankind once and for all, for, if any person refutes this claim as proven factual, viable, valid and truthful; that person or those person(s) would be committing the greatest abuse of "power" in the history of mankind.

The Ultimate
#1N

You cant' have 1/2 a
Magnet

Contained in the image above is a configuration of 440 magnets, each magnet is 0.5mm thick and 8mm in diameter, there are 8 rows of 55 magnets set at an equidistance apart with an angular separation of 45° . All of the magnets are the SAME, all pointing the SAME direction, all set at the SAME angle, all of the SAME power, and all of the SAME size. Thus, it is a replication of an atomic structure, (at the visible level. At the atomic level, it's just ions in the same pattern producing ONE field all the SAME. The ultimate expression of infinity is the fish, the ultimate expression of its practical use and function is the micro EMI.

It goes further, "but" is the world ready for "further"? If #N1 is infinity, that requires nothing more than a secondary earth to transfer its energy, it is therefore possible to do the same with JUST ONE MAGNET. To create the circuit... A standard wall socket has a "L" (Live) and a "N" (Neutral); (Earth is a common ground circuit). Therefore, if the LIVE pin was REMOVED so the only circuit was "N" and "E" then "NE" (any) connection will do; As long as you use a

magnet. It looks like this (N-PIN (+) [(-) SN (+) E-PIN]) Neutral (+) to (-) South North (+) to Earth... a perfect circuit. The Neutral wire act's as the pickup for ion and runs all around the house, out into the street, down the road and all over the country (picking up ions on the way).

The aerial is already fitted GLOBALLY, just CUT the live wire and use the rest. The above circuit is an infinite circuit; it is impossible to “overload” the circuit as the attached device will only draw the energy it needs to run at its maximum effective use. All energy comes from EM (Universe) to Earth, to its EM wave, the wave baths the Earth's surface, the ions are drawn into the ground, thus onto the common neutral wire, through the device, through the magnet and back to earth. It's cleaner than the cleanest acclaimed entry source, it is silent, no moving parts, and 100% efficient. It is the only system known to mankind (and throughout the universe) that is 100% in its energy use. We'll not call it cold fusion; we'll call it ICE (Instantaneous current to Earth); now that is ICE COOL.

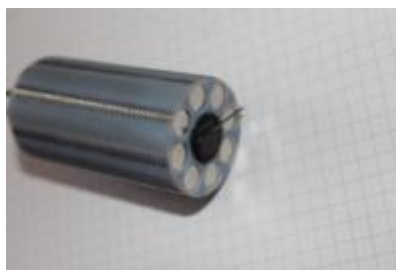

Now, I'm waiting for the person to say “bollocks, and bullshit”, I'll smile and say, ok smart arse what's this:

Here is, 440 magnets configured as stated above,

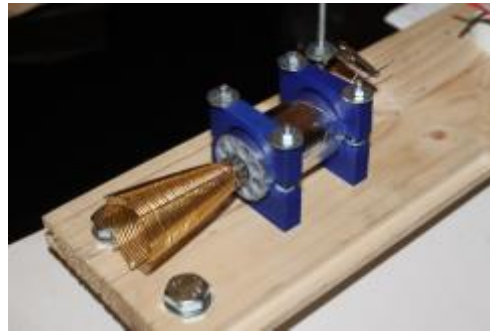

Adding an “exotic composite” antenna [Gold, Nickle and Ferrite] (creating a unique electromagnetic pragmatic condition of ION flow):

Inserting a carbon ferrite core wrapped in an insulated annealed wire helix continues the ion flow between the antenna and the carbon ferrite core and looks like this:

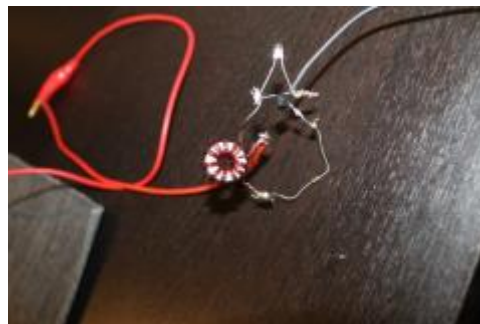

Assemble into a chassis (for stability):

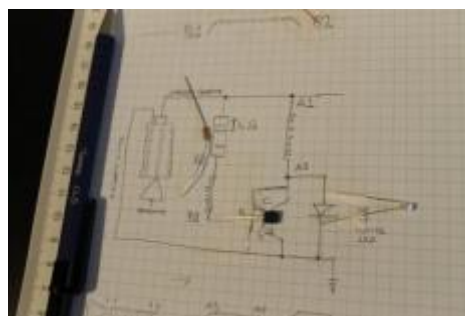

Add to terminals for positive and negative (North and South):

Connect a “joule thief” into the circuit:

And, to simplify, here is the circuit diagram:

Connect it all together, and what do you have? Hey “presto”, FREE POWER!

Why stop there? This unit is less than 100mm in length, and when you build a BIG ONE:

Much more power can be generated, so much so, it is possible to power a home, a car, a truck, a train, a boat, a ship, a hospital, a school, just about anything you care to desire; the cool thing it, it cost NOTHING to run, it just uses the FREE ions from the air, IONS from space from the electromagnetic fields that surrounds the planet that is charged from the solar winds from space and right across the universe. This device DOES NOT need to be on the planet to function 100%, it just needs to be near ions, anywhere in the universe and it will produce all the power that is necessary. At the start of this chapter I displayed this:

And, now you know how to make free power, you know why you can make free power, and you know where the free power comes from. So why you still paying for something that has been free for more than 30 years; As it was THIRTY YEARS ago when I first produced free energy and the UK and the US have until today forbidden me to tell you; they have done everything within their power to STOP me helping mankind; all because of their incessant greed for money, and lust for power over another.

The value displayed on a multi meter is just that a value, yes (some) will fake it to make them look good. I've no need to fake it. [...]; And, as stated at the start: *"Let's move forward and*

make lots and lots of FREE light's, FREE battery chargers (hold on we don't even need those), FREE power supplies for TV's, Computers, and Multimedia players, FREE heating and Cooling, FREE motion and transportation, FREE just about anything that uses one of four; Four being (Oil, Coal, Gas and Electricity). All without exception can be disposed of and replaced; all you got to do is read and follow the instructions".

HERE IS THE BIT YOU NEED TO KNOW:

Take a box full of odd parts, discarded wires, coil's, springs, fuses, L.E.D's, resistors and transistors; (most you will find in an old radio (if you have one in your shack)); A "Radio's hack"; lay them all out and see what you have, and what will you need to get started:

1. A carbon ferrite ring the size of a "penny" (20 – 25mm diameter).
2. Some copper wire, it will need to "coated" as not to create a short circuit; about TWO meters is enough.
3. A resistor, you know the thing that "stop's" something going the other way. You'll need one that is one thousand ohms. 1000 "o" H.M.S. (but not Liz's ships) [and] resistance is futile, because all we are going to do is "suck".
4. A transistor with THREE legs, a left, a right and one in the middle.
5. An L.E.D. (1.5 or 3.0 or 5.0 or 12 Volts) it does not matter.
6. Two separate lengths of coated copper wire, (a few meters will do).

Totaling up the cost of all the part's above and it is about ONE EURO; Yes, that is the total cost of all the parts to make free lighting from now until the end of time. Connect them all together into a single electrical circuit and you will build a "joule thief"; Joule is spelt right as it is JOULE as in the energy unit and not JEWEL as in the FAKE cost of a diamond.

All circuits have a positive and a negative, or a "plus" and a "minus", and all have one of two grounding circuits, (an earth); In a house, an apartment, a flat, or a room, it is a solid earth connection to "err" EARTH, that's why it's called an "Earth"; In a mobile device, your phone, smart-phone, mp3 player, smart-watch, camera, video player and more, they all use a "floating earth"; it's got to be a floating earth as its not directly connect to "Earth"; You look "fucking" silly walking around trailing five kilometers of wire; And, given the number of mobile device's there would be the biggest "snakes wedding" of tangled up wires in the street, (so use a floating earth). The symbol for an Earth connection is "E" and for TWO earth's it uses the roman numeral of "II", putting the two together gives you E II (The same as H.M. Queen Elizabeth's personal monogram (E.II)) looks like SHE knew the key to free power as well. Do you want to know why she's Queen? Cause she's holding the world (Oil, Gas, Coal, Electricity, Banks and global power) to RANSOM:

"IF YOU DON'T LET ME BE QUEEN (E II), I'LL SHOW THE WORLD (E II) AND IN DOING SO YOU WILL ALL BE FUCKED". (Not a nice lady at all). Why refuse mankind their right, just because she wants to be top dog (bitch)?

So, "We" have a circuit with a plus (P), and a minus (M) and two earths or P.M. E. II (*Prime Minister and EII*); that's how it's all plugged together today, it's plugged that way to make YOU use a thing called "Electricity" [!], You know "*Take a handful of magnets and spin them around some copper and collect the "energy" field that it produces and call it 'ELECTRICITY'; To make the magnets spin we'll use a fuel, (Oil, Coal, Gas, and now nuclear fuel), Sod the pollution it produce's WE won't be here when it gets too bad to breath*".

Therefore Electricity is “PUSHED” along a wire, (amps and watts) or its (current), and its drive is the voltage, (110v in the U.S. and 220 ~ 240v for the rest of the world), push the “electrons” hard enough and they will re-spin another motor, (a fridge pump, a dish-washer, a washing-machine, a tumble-dryer) or force it hard enough under resistance and it will get very hot, (a cooker, an oven, a microwave and the like); Each of them in fact all of them use a thing called electricity; And, all of them use P.M.E. plus, minus, earth. To clean it up a little and “standardize” the naming convention, change the “M” minus to “Neutral” “N”, as all electrical circuits a “push” wire (live) and a “neutral” wire, and an earth (to ground the circuit). The big picture goes like this:

1. A magnet draw's its energy from the universe, (it's the only thing that can).
2. The energy is called Electromagnetic energy, (and it's not manmade).
3. To extract the energy, spin the magnets within a copper wire field.
4. Push along a wire to an appliance and ground the energy back to earth.

As simple as 1,2,3 and 4. And, for that very simple task, others charge you an arm and a leg for something that is for free! Going back a few steps to number “one”: (*A magnet draw's its energy from the universe*) indicates that the energy is already there, and all that needs to be done is to “extract it”; the old-fashioned way is to spin the magnets and consume a shit load of resources from the planet and pollute the planet until it's destroyed just like MARS. Choke up the atmosphere until such a point in time that the Earth's natural “oxygenating mechanism” is clogged up it dies (Plants, Green stuff (trees and more), all convert CO₂ to Carbon and Oxygen in a perfectly formed natural re-cycling system. Sound a bit dumb to me. Why kill the thing that keeps you alive? The NEW way of extracting the energy is the way it was meant to be, that's NOT push and spin and hassle the energy, but to seduce and coax the energy, invite it to come out and “play”, never “bash it with a bit stick” you'll just make it angry “Atomic Bomb”, but coax it, seduce it, stroke it nicely and you can have as much as you want. There is no need to worry about an OVER-LOAD, you can't get an overload if you have no load at all.

The new way is the natural way, the universal way and the right way; all electromagnetic fields are inseparably linked to the universe and the planet, (Earth is just a great big antenna); And, taking apart the word “Electro-Magnet-ism” suggests clearly that a form of “electricity” resides within a magnet “is “you” “mmmm”. A magnet, likewise as a North and a South (manmade names), but, still classifies as a plus and a minus, (+ and -), and there is still an Earth “E”, all that is needed is TWO EARTH's, (E II). The Earth is positively NEGATIVE in its field, (South); And “We” all know that North is drawn to South, (plus towards a minus) or towards Earth. So, if “We” Earth the Earth as in EII we get a grounded Earth circuit from the plus to the minus and back to earth and back again to the Earth's magnetic field, (*a perfect loop of itself*). Take the ferrite ring, wind two paths of coated copper wire, one left hand side and one right hand side, this give FOUR wires, two left and two right; Let's call the A1 and A2 (left), and B1 and B2 right, now short our A2 to B2 and we now have only two output legs (a plus and a minus, with its own floating localized Earth); take A2 and connect to one side of the 1000 Ohms resistor, and take the B2 to the center leg of the transistor, take the other end of the resistor and connect to the left leg of the transistor, connect the “WRONG” leg (Anvil side) of an L.E.D. to A2, connect the other leg of the L.E.D. to Earth, and connect a SECOND Earth directly to A2, (E II). The floating earth is earthed to earth, and earth is also earthed to earth itself; the minus is now the plus path and the plus path is now connected to the Earth's electromagnetic field which is now directly connected to the biggest antenna we have that is planet earth which in turn is plugged in to the electromagnetic field of the WHOLE universe. When done correctly the L.E.D. will GLOW, it will glow with a wonderful bright BLUE light.

It is NOT electricity, (We are pushing nothing), we are sucking, pulling, seducing the electromagnetic flow. The wonderful blue light is NOT an “electron” and the discharge is NOT a photon, (they belong to outdated electricity), but they are IONS and “Neuons” straight from the Earths electromagnetic field. When grounded via a double Earth (EII), the IONS are discharged back to Earth and thus back to the Earth magnetic field to be re-used time and time again, (WITH NO INPUT (or) USE (of) OUT-DATED ELECTRICITY). Don’t believe me? Well what the fuck is this!!!!

Above and to the left of the image you can see the ferrite ring and the copper windings, below the WONDERFUL BLUE GLOW you can see the resistor, the transistor and the TWO Earth’s. So, you may question and shout and scream; “You fucking fraud, it’s a fake a scam, a lie”, and I’ll say: “OK “fuck buddies” take a look at these:

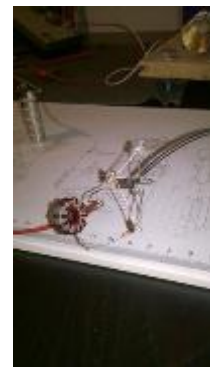

Twin Grounded LED (no input electricity)

Output Voltage 82 Volts A/C

ION transfer Engine

EII Seduction coil assembly

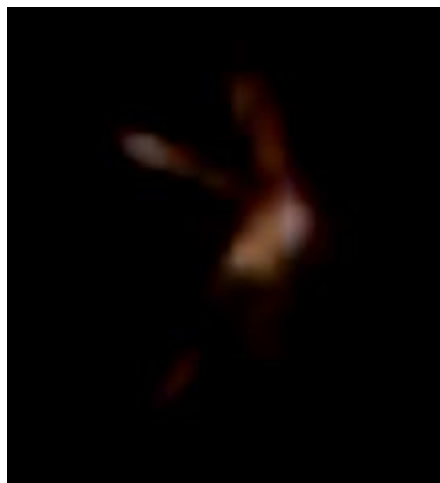

The real cool “shit”, is that you can have AS MANY LED’s as you want “daisy-chained”; all from one seduction coil and two earth’s (EII); Where an example of its practical use would be a motorway, an Auto-route, a free-way “lighting”, Street lighting, with ONE seduction coil at one end, 10, 20, 100, 1000, 50 or 100 thousand LED’s all daisy chained, finalized with a double Earth II; a second example would be an apartment block, a house, a school, a hospital, (any building), once again “a daisy chain” with EII and a coil; want more? Every place where you see a light today can be replaced for less than one Euro and will bathe with a wonderful BLUE light (from now until the end of time); Want more? Every cell-phone and mobile device, every battery-operated device, every TV, MP3 player, Smart-watch and more, ALL (WITH-OUT EXCEPTION) can be run with S to EII (Seduction of EII) “SEII”; you want video as proof? Here you go, follow this link:

<https://www.youtube.com/watch?v=u-julON3lm8&feature=youtu.be>

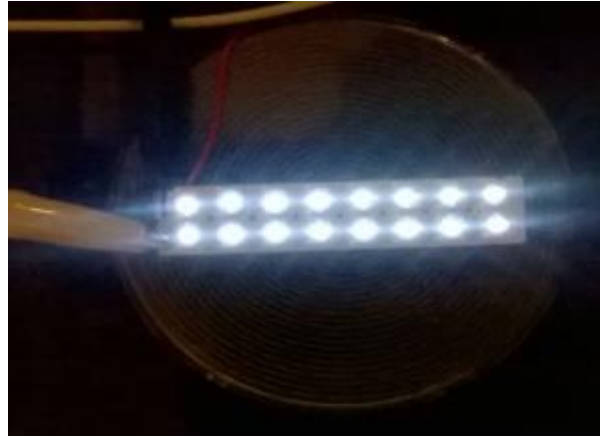

Today Wednesday 23rd November 2016 (at) 10:30 GMT; I took this picture. WHAT the fuck is it you're going to ask? It is an ION, (not an electron or photon) but an ION. It is "TRAPPED" between two points in space less than 1/100th of a millimeter apart and last for a mere 1/16000th of a second. It is known as the ION GOLF BALL. This is the first time it has ever been caught on camera. The color is BLUE and NOT "white" like a photon, it was NOT produced with electricity but produce by ION SEDUCTION. A replacement for Electricity. If you want to know more, take a look at my you tube of the same.

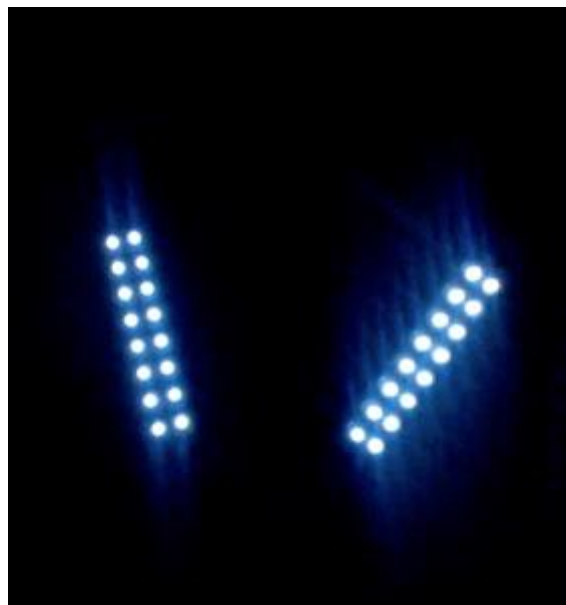

The temperature at the core is as hot as the SUN, it size is 1/1864th of the size of an electron, and that folks is VERY SMALL. When “scaled up”, (from something smaller than a pin head), the amount of output power is more than 1000 times the power of any ATOMIC reaction, (including the big bad bomb); the orgasmic wonderful thing is, YOU can make this on your desk top. When questioning weather, (this) is actually possible; [Today 2nd December 2016], I repeated my original test, and once again produced HIGH voltage from nothing more than an inverted LED and some fresh air; The fusion reaction within the core of the LED acts like a capacitor or a charging circuit; In the image below you can see a nice SPARK from NOITHNG, the gap (of) the spark is 5.5 millimeters; when applying Panchen’s law, it equates to a voltage of **450 ~ 500 Volts**. That’s TWO TIMES MORE than a household supply from an LED that cost 0.50 Euros; That’s **450 ~ 500 Volts** for infinity for the cost of NOTHING. It would be wise of me to point out to each of you, ALL TEST WERE DONE IN THE PRESENCE OF AN INDEPENDENT PERSON.

This image lasted less than one second, it is as hot as Lighting to earth, its 500 Volts in strength, and can be repeated for infinity; its full title is a “Light Emitting Diode ION ARC reactor”. What more does mankind want is a single document? Not wanting to PROOVE the world WRONG (Again) [!!], one LED is simple, two makes you think (+/-) both going the wrong way [?], but how about 16 LEDS all illuminated just like this:

The number of LED's that can be connected using this technology is UNLIMITED, and to prove another point, how does 32 LED's look like, well it looks like this:

Back to the “scientific” part, more of the why, the how, and the wherefore;

Why; LED's (according to the now clearly outdated “Book of electricity”), power goes ONE WAY; well that is not strictly true, YES, it is true, (for the defunct electricity), but not for ION transfer; When electricity is used, an electron is FORCED to jump the gap between the anode and the cathode of the LED, and in the process, a photon is released, (nothing clever at all in that); the electricity is FORCING something to happen and when you force anything, something has to give way. But ION transfer is WAY beyond “brute force”, it is the art of seduction at it's very best; The seduction method is unique to COLD FUSION, (at room temperature).

How; To view an electrical circuit, it (the circuit) has three connections, a live or positive, a neutral or negative and a common earth or ground. The electricity within a circuit is forced along the live wire, through the system and back out of the neutral wire; the ground is added for “safety” reason. ELECTRICITY KILLS. For ION transfer, an ION is seduced along the neutral wire (no charge) and seduced to Earth or Ground (no charge), within the seduction process the ION jumps the gap, or leaps the gap; one could say it’s a leap of faith [!] But this faith you can see, you can touch, and you can use. As it can be seen, it is no charge and no charge, two times nothing is not nothing, it is one of infinity, if you don’t believe me just look at the images above ☺ Better still build one for yourself and count the cost of nothing times two and look at the light and say to yourself nothing plus nothing is something; (now how can that be so). Well when an ION moves in this fashion, for an instant in time it is neither negative, neutral or earth, it resides at a point in time of no time. To examine and expand the condition between the anode and the cathode of an inverted IONIZED LED (under the most powerful of microscopes) would show a BLUE DOT, (Blue is hotter than white and white is just a collective of all and not a singular condition), the blue dot is a hole from nothing, it is fed from the universe; It is fed from the electromagnetic field that surrounds the Earth, which in turn is fed from the solar winds and across all of time and space. (I’ve said that before so I won’t go into why that works).

Still skeptical [?], still need convincing [?], may I offer to “YOU”, (humanity), the very first Perpetual Energy Transfer Light (PET-L) connected to EIGHT LED’s

Hmm; What are you looking at now [?], this is a PET-L it is powered from NOTHING, it uses two Earth’s known as EI and EII, both earths carry ZERO current and ZERO volts, The device has been specifically built from very special materials to support what goes on inside; before you ask the stupid question “What inside”, I’ll reply with “Fresh Air” and some wires, (nothing more than that); if you want to know more then you are going to have to communicate with me, in the same way that others have done, (including all investors), and, you guessed it, you will have to sign an UNDA, (Universal Non-Disclosure Agreement); where the condition for failure is a cool ONE BILLION Euros [PER EVENT]; How heavy is it [?], where can it be used [?] how long does it last [?], how much does it cost [?], and the other 10,000 questions that are currently racing through your mind. I can sum all of that with some questions that I recently answered, just like this; This is an article that I post recently to “those” who think they are clever, and it goes like this:

“If “YOU” want to use this, own this, have this in your possession, it comes at a very small cost; that cost is 0.63 Euro’s, per person per country; And, the only way to get your hands on one of these is by country committal; If your country does not commit 0.63 Euros for every one of its residents and or citizens, then your country WILL NOT be eligible to use this technology. What do “We” get for 0.63 Euros, you get ME, and my brain, my knowledge, my wisdom and know-how; trust me when I say “I know an awful lot more than you can ever think or dream of”. So, what is it worth in the good old fashion terms of “money in your pocket”, I did say in YOUR pocket and not the pocket of some energy company, not in the pocket of some Oil company, and not in the pocket of some “extortionist” along the way; I’ll give you an example of how much this is worth to YOU, (Humanity), and NOT the BANK (or) ENERGY Companies (or) the Oil Companies and definitely not the WAR MACHINE:

“Allow me to tell you something, You all know the "Wright Brother's", and that thing they done with a few sticks of wood, some old wheels and some know how; Today YOU call it an AIRPLANE; And, likewise YOU know of that man call Albert Einstein, yes the same one that wrote $E=mc^2$ (and got it back to front); You also know of another man, Mr. Nikola Tesla and his brilliance that was denied to the world, (that was until he died and all of his family died), the brilliance that should have changed the course of mankind, (but for the GREED) of the Oil companies. Above you see a picture, it was taken today (Sunday 4th December 2016), this is NOT the first time I have done this, but it is the FIRST TIME that built one that can be sold. It is a Perpetual Energy Transfer device, and, “NO”, the lamp on top does NOT light up. It was placed there to remind mankind of the falsity of Electricity, the device has TWO terminals that can be used for connection purposes. To date (just 6 days after the first illumination of an LED, I can now power 80 LED's; The output power is NOT limited to 80, it is unlimited in its function, 80, 160, 320, or 640, or 1280 or more....

Recently I conducted a financial study of the use of "communal" electricity. The study was carried out on a SIX stories apartment building's communal lighting, the standard bill for ONE YEAR was a staggering 1776 Euros, JUST TO LIGHT UP THE STAIRWAYS! The device shown above and its associated usage costs for ONE YEARS is 3.64 Euro's... That is right, you read right THREE EUROS and SIXTY-THREE cents. That is a simple cost saving of more than 1770 Euros. That was for ONE apartment building, and if that were to be multiplied by the number of apartment buildings in an average city of say 1000, that means a saving of more than 1,769,360 Euros; To now multiple that by a factor of "fifty" “apartments” per apartment building, results in a cost saving of 88,468,000; then multiply that by the number of major cities in a small country (let’s say 20) results in a fuel saving cost to the population of 1,769,360,000 Euros. That is for a small country with a population of less than four million; It does not take into consideration residential small houses which is the same sum again, 3,538,720,000. When applying the cost saving's as Kilo Watt hours, and its corresponding CO2 generation to make the electricity than is no longer used, it equates (when applied globally) to more than a million tons of CO2 reduction per year. When multiplying the cost saving by the smallest of factors, that of 191 countries, 675,895,520,000; that's more than HALF A TRILLION EUROS saved.

I've not even covered street lighting, shopping centers and mall, schools and hospitals, government builds and the like, so let’s just multiple that lot by 10, or 6.7 TRILLION EUROS saved, and the corresponding CO2 saving to mankind, that's got to be worth at least 2 to 3 degree’s global heat reduction.

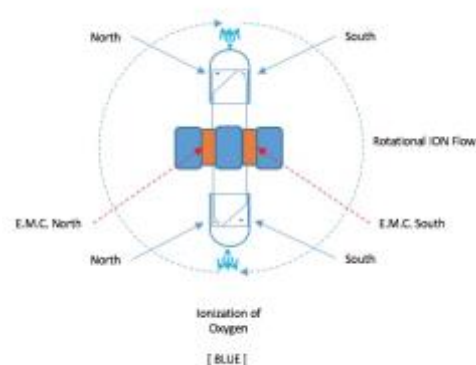

So, that is 6.7 trillion back in the pockets of the people and not in the pockets of the governments and the banks, that's 6.7 trillion for food for the starving, that 6.7 trillion for real housing for everyone, and that 3 to 4 times the amount of the total funds available for emergency aid globally, and I done it at home on a Sunday morning while drinking my cup of tea. You want to see what else I can do?"

Now, (if) "You're" [NOT] impressed so far, it is time to "UP THE STAKES". Producing infinite power is a piece of cake, I said so at the start, you just need the right ingredients; And, described above is all that you need, (and) it's associated cost (per unit), that cost is pennies. Want me to put it into perspective? The U.S. war-machine just launched it most powerful "stealth" warship (*another stolen technology of yours truly*), they, (the U.S.) spent 4.4 BILLION DOLLARS on a chunk of metal to kill people, and you know what, it broke down on its first trip to sea; That's 4.4 Billion\$ on scrape metal, where that same 4.4 billion could have provided total and utter coverage of every road in the whole of the U.S. with "ION" energy, (and it cost NOTHING to run). Once installed, it's "fit and forget" ← Another of my stolen phrases; Not putting the "boot" into the U.S. (*only*), how many other WAR-MACHINES waste money KILLING people? How much do they waste killing people? How many homes, hospitals, schools, public buildings and more could have been lite up with ION L.E.D.'s? I can openly say EVERY home, hospital, school, kindergarten, library, hotel, car, boat, ship, train, plane and more... Every place you find a NORMAL (defunct) light, each and every one can be replaced with this technology, it cost pennies, cents, lepa.

All of the above was achieved with a Joule Thief, but the really cool shit occurs when you remove the (JT) and it still works on just TWO WIRES. Yes, two pieces of wire and an L.E.D.

Though not trying to OUT-SMART Mr. Albert Einstein, (*I've done that in so many ways*), or belittle Mr. Isaac Newton, (*Likewise I prove him wrong on so many occasions*); I could list them all, with the exception of my dear friend Mr. Nicola Tesla, (another SMART ASS like myself). The last Fourty-Two Pages are an insight of things to come; but when the push comes to the shove, (in this case push comes to suck); the ultimate expression must be:

"God said, 'Let there be LIGHT, [and] behold the earth was bathed in light'" (*Well it does say so in the acclaimed holiest of holy book's that ½ the world adheres to*); Therefore, if god said.... Let there be light, this must be a true likeness of GOD himself! (Your book, Your words- NO MINE). Do unto others as you would have them do to you.

So, what's going on in the two images above? Firstly, the hand is "mine"; placed upon my hand are THREE magnets, TWO "inert" spacers, and ONE L.E.D.; The "Ionization" of Oxygen can be clearly seen; And, in the second image (to the right) is the line schematic of an "Electromagnetic closed loop". Just to really upset the "*apple cart*" of the physicists and the "acclaimed clever ones", here is a little bit of electrical information that is totally impossible according to the clever ones; An L.E.D. has two principle parts, an "anvil (which is positive (or) Anode)" and a "Pillar (which is negative (or) Cathode)" normal electricity flows from the anode to the cathode to earth (a discharge of electrons), it also does the same within a torch or battery connected L.E.D.; Though, if you look closely you will see that the upper L.E.D. and the lower L.E.D. have opposing charge connections [?]; (or), to put it another way, "BOTH" E.M.C's have a plus and a minus connected. A plus and a minus make a circuit; two plus's and two minus's make a circuit too. The completion of the circuit utilizes a "floating Earth" and the "energy source comes from the EMC, (Electro Magnetic Compression). Thus "portable light" portable without "electrical" power, and portable forever; Thus, to produce LIGHT (without) a connection to ANY electrical circuit, [and] without the need of an ancillary power, just the gift of the universe, places this person amongst the GOD's of the creation of all power, for the power you see above contains more power than all of the power ever generated by Hydro-Carbon's and an untold fold MORE than bashing any atom into another, (*The Atomic Bomb*). The secret above has been written above, all you have to do is read the instructions.

What the fuck is going on, I hear you all shout, (oh and those who control the power are pissing in their pants); It's easy as 1,2,3; I always do easy and simple, there is no need to be over complicated.

1. L.E.D.
2. Electromagnetic Fields.
3. Magnets

As easy as ONE, TWO, THREE. If your clever you can work it out, if you are from CERN or NASA then your dumber than I thought! If you belong to [ANY] Energy creation system, then "sorry for your loss"; So, [IF] I have disposed of NASA, along CERN, and I totally "SHREDDDED" B.P., Shell, Chevron, Saudi Arabia, and any OIL producing organization, and I "flushed down the pan" all electrical companies along with every battery manufacture, dismissed and reduced all capital gains systems to dust "ash to ashes dust to dust [...]"; Now, who's going to stop me? "YOU" or "You" or "you", OR; Are the remaining members of the civilization known as humans, (that's the other 99% of mankind), are you coming to my aid and rescue, or will YOU allow another crucifixion before mankind?

Now, You, think on, [...]; The above 43 pages are, without a doubt, are the making of the revolution (of) "mankind"; They (the page's) represent an historic turning point in all of who "WE" are and what WE CAN become. The 43 pages rely on proven fact and fact alone, with nothing derived from fiction, fantasy or a lie; Seeing is believing, more over doing it for yourself is proof of your own ability over than of the "advertised" dumbing down of each and every one of you.

The finalization of this sub-section, (of) this part of my "project" for the freedom of humanity is the production of infinite POWER and LIGHTING for each and every person on this planet; FREE from ANY cost what so ever, FREE to use day or night, FREE to use in the most remote

of place's, FREE from any production of an CO₂, and finally, FREE from the use of ANY HYDRO-CARBON. The image below contains (but is not limited to); Two 1.5 x 1.5cm 12 volt "high output" surface mounted Light Emitting Diodes and ONE 1.5volt standard "Anvil and Pillar" LED. To note, 12volts and 1.5volts cross connected without failure or burnout, and to note that both voltages and all three devices are running, or illuminated without ANY INPUT WHAT SO EVER of ELECTRICITY. The circuit that is created uses nothing more than the EARTH we stand upon. The positive side of the LED is connected to Earth, and likewise the negative side is connected to earth; this is known as twin earth of a floating earth; Very simple when you view Earth as the biggest battery of them all. This technology is NOT limited to "Earth" (as a body or mass), as the ION transfer that occurs can also be induced in free space making this the most PERFECT source of ENERGY known to mankind and throughout the whole of the universe. The "mathematics" behind the functioning of the LEDS far surpasses that of Mr. Albert Einstein and embodies the brilliance of Mr. Nickola Tesla; The only failing point of Mr. Tesla was his time in history. Encompassing all of the above as absolute and definitive proof of the fact that $E=MC^2$ is quite simple back to front, or to use a scholastic and academic statement, "Alas Mr. Einstein your calculation was WRONG".

To achieve the above a mathematical inversion of $E=MC^2$ need to be applied and in doing so the remove of "MC²" is required. The resultant part is E (Energy) is equal to (=) magnetic coherency of two circuits utilizing a singular polar field (or ½ a magnet). Thus, to re-write the "power" equation results in "Zero of infinity divided by half (E.M.) equals infinitive power"; A complex definition of the division of infinity, though to simplify again, and again result in the equation being represented as "O.N.E." (or) "0(of)N(of)E" (or) 0·N·E, reducing further to its minimal state by definition results in N1=E; smaller, neater, and infinitely more accurate than $E=MC^2$.

“NOT” wanting to “spare the rod” to any company, corporation (or) “Profit Making System”, let’s investigate how this technology can and WILL help each and every person. The fastest route to market is one of two paths, the “domestic lamp or light”, and, the desire of each and every person, the portable communications device, more commonly referred to as a “Smartphone”. Covering the first, the domestic use of lighting; this technology allows for a perpetual state of illumination to be available to every house, apartment or home, be it a metropolitan condition “New York, Singapore, Sydney, London, Paris”, (to name a few), to the smallest remote home or dwelling, all can have perpetual lighting for free. Removing the burden is many fold, some locations neither have or never will have a dedicated connection to the consumer network of electricity; Thus, this is a perfect solution for the remotest place; Be it hot or cold, dry or wet, it makes no difference to this technology; The LED will illuminate under ANY condition (for ever); the net value to the end user (times 7.4 billion humans) is astronomical, and it would be silly if I tried to write the number of “zero’s” on a piece of paper, but suffice to say, it’s a lot; **IT IS PRICELESS TO HUMANITY AS A WHOLE.**

Secondly the “Smartphone” arena; now, how many smartphone devices are there on the planet? As indicated there are some 7.4 billion humans, and not being over optimistic, it would be mathematically correct to assume 50 percent of humans have access to at least one smart device, that’s 3.6 billion devices that all use a “BATTERY”, a battery that is now defunct, redundant and going the direction of the dinosaur. Now, before you put the “cross-hairs” of the assassin’s rifle upon my forehead; let’s think ahead. To remove 3.6 Billion batteries is to remove 3.6 Billion chargers, and removes 3.6 billion “re-charges per day”; 10 Watts each, that is 36 BILLION WATTS of global energy saved: To convert that into tons of CO₂, its roughly 1Kg per Kw, that equals 36,000 metric tons of CO₂ [PER DAY]; making it the single biggest reduction in CO₂ globally in one foul swoop. Now adding that saving to the light (wattage) saving; you have to ask yourself “how many lights are on the planet [?]; It could be easily suggested that there is at least 1 trillion light’s, each using 10 watts of energy; That is 10 trillion watts (or) 10,000,000 tons of CO₂, added to the smart phone consumption results in a CO₂ reduction of 10,036,000 tons of CO₂; and that boys and girls is a perpetual reduction. It is not a ONE-OFF event, it is perpetual event, a nonstop reduction of CO₂, a cleaner planet for you, me, and humanity. Who’s the loser in this game? Those who produce “electricity”, but who is the winner in the game [?], EVERYONE, and that includes the biggest body of all, that of the planet Earth. If this technology is adopted forthwith, CO₂ (globally) will be reduce to pre “industrial times”, 1800 A.D. within 2 years, and a total reversion of CO₂ inside 10 years. The benefit of the unprecedented global CO₂ reduction is the knock-on effect to global warming. Recently, the Paris accord on Global warming suggest a 2-degree drop is needed, this technology will make that 2 degree drop with ease; The dramatic effect will revert the current anomaly in global weather patterns, (Hurricane “what-ever-you-want-to-call-it”); all will subside, reduce or be suppressed to pre-1800 A.D.; With no devastation, no catastrophic flooding, crop destruction, or famine; the need for global AID in (trillions of dollars) is no longer required, So the trillion lost from not burning Hydro-Carbons is recouped in the trillions save in aid relief around the world; a clear win-win situation (again). Dropping the temperature by 2-degrees stabilized the weather, drought areas now flourish with an abundance of vegetation (green stuff that naturally extract CO₂ from the air); the drop in temperature causes the polar ice caps to re-freeze (the biggest storage of fresh water on the planet); the polar ice-caps are the thermal engines for the oceans too; re-establishing the natural thermal currents not only re-oxygenates the sea, it re nourishes the sea with plankton and microscopic lifeforms;

Which, in turn feed the food chain of the world's oceans, feeding them feeds YOU. 2 degree's is food for all; 2 degree's is light for all, and 2 degrees is a free for all.

The capturing of an Ion is more than a "bright lite", it is more than free energy and more than CO2 reduction; When compared to the cost of CERN; The Large Hadron Collider is nearly 30 years in the making - and costs the member countries of CERN and other participating countries an estimated €4.6 billion (about US\$ 6.4 billion). Like those late-night infomercials, however, we can say "but that's not all!" Extra things like detectors, computing capacity cost an extra €1.43 billion. The United Kingdom, for example, contributes £34 million per year, less than the cost of a pint of beer per adult in the country per year. The United States contributed approximately \$531 million to the development and construction of components for the LHC (with the US Department of Energy shelling out \$450 million and the National Science Foundation kicking in the remaining \$81 million). That is millions and millions of humanity dollars on yet another miss-guided adventure of "smashing something together", We managed to capture an ION in a stable condition, and photograph it on a smart-phone for 10 Euros; Thus, it becomes very clear that the "acclaimed CLEVER" ones are nothing more than a group of CON ARTIST, (or) they are so clever in their miss-guided action's that they can no longer see the wood for the trees. It has been proven time and time again, smashing two things together is dangerous; so WHY DO IT; pumping millions and millions of watts (CO2 creation) in to something is a very big waste of natural resources, especially when the same can be done for a few euros. Throwing the preverbal "custard pie" into the face of CERN results in them all sitting in the corner with a cone upon their head's "err I am the dumb one", sat in the class are four or five who have worked together and have listen to the words of one man, placed their faith in another who brought to them and to you the gift on ION Energy.

Having "exampled" just a few of the powers within ION Energy that encompasses just about all of what mankind and humanity do today; it baffle's and beguiles me to a point of absolute frustration, (now I know how "Bertie" felt); A gift for you, from me, and all I see is the utter abuse to humanity. The money, the greed, the pain and suffering, who or what person or species would want to inflict so much pain upon another all for their own self greed. It's one of infinity, a power so great that "We" all shudder with fear, or a COWARD hiding behind a falsity of their assumed power over another; that results in "kill him, kill her, kill it; they, it will jeopardize all that we have done, all that we have gained or stolen", a coward, a liar and a cheat, that is the type of person who would inflict so much suffering on a species known globally as humanity.

It takes a MAN with big balls to take of the might of the energy companies, the banks, the government's, and the war-machine; am I sacred, frighten or worried? NOT AT ALL.

Do YOU want to be part of the problem, (the abuse and the pain) or do you want be part of the solution, that of pleasure and gain? You are either part of the problem or part of the solution; and I hope that you are the later, for all of those who wish to be the fore, they will no longer be considered human in this matter.

Closing "chapter four": I MUST state openly to every person who read's this; although 30 years ago I built all of the above; today I asked for help from a few friends, (well a lot of friends) each have helped in their own way, some have provided work space, tools and an office, some have provided accommodation, "**food and clothes**", some have provide "up-to-date" technical know-how and 3D imaging, and some have even funded the fabrication of the

parts to build both the micro-emi and the desktop version too. I have to openly thank each of them for putting up with me, and my inability to communicate in what people call a common language. (it's not my thing).

But what I will give for free is technology that has been forbidden for more than a third of century, and I will go further and give to mankind more than he can ever desire, I will show him how to STOP TIME, and how to compress time and space, how to use this technology to leave this dreaded place, how to move beyond this star and meet the myriad of other civilizations that are scattered across the universe.

Before I give this gift, and it will be my LIVING WILL that all of my technology can only be used for the BETTERMENT of mankind, and NEVER be used in anger against another soul; the WAR MACHINE is broken, defunct and outdated; likewise, money, greed, and the lust of power died along with $E=MC^2$.

I will make my own choice of who will assist me; alas, the dinosaurs' (of mankind) cannot help, and would probably refute this to save their own ass from a metaphorical kicking that is coming their way.

Chapter four, sub-section three, “Spinning sparks from nothing”

To offer a “Phrase” for a function; Where the function is an energy release from an electromagnetically induced condition, it would have to be “Electromagnet Inertia plane displacement” (EMID); When used within a motor the output product results in EMIDM; The electromagnetic inertia displacement motor. What’s one of them [?] I hear to ask; well sit back, read and learn, (*as always*); An EMIDM is a simple motor (*not so simple to others*), it uses nothing more than information already provided within this document, it uses the displacement of an inertia plane to act as a fulcrum against its own opposing plane.

To understand EMIDM, I do not want to have to repeat myself more than once, (*Please read all of the above*); With that said, let’s move forward [*literally*], let’s “MOVE” forward. The inertia plane is a single plane that can be transposed from its logical and physical EM displaced position of 90° to the electric wave, (*that has already been proven*), it can also be moved more than 90° , (*also proven*); Thus, if a plane can be moved to 125° of itself from nothing; and two displaced inertia planes are opposed to themselves results in 250° of common displacement, and that results in 110° of additional inverted inertia plane is the alternate plane against that of its own inertia conditional state, that of the universal condition of 90° to the electric wave.

The addition 110° of inertia movement is an additional force that can be used as a “*field effect*” to offer accelerated resistance to the natural common displacement of the nominal EM fields that are aligned to the electric wave. Now that was easy [!], said with a smile (☺).

Utilizing more than one of the above conditions, each being of identical proportions and angular displacement in their opposing plane results in a locus point of infinity, a point of nothingness that does nothing, it will do nothing from now until the end of time, that is until you do something with it; by now rotating the first composite plane to a negative 45° and, likewise it’s opposing composite inertia plane to a positive 45° , creates an addition point of inertia displacement against its own opposition. To view this as a condition, it is a spin in a clockwise direction; by allowing “variable geometry” and “variable pitch” to the angle off-set from a range of -45° to $+45^\circ$, both in the local and the opposed plane allows for any angular rotation to be created, be that clockwise or anti-clockwise.

To view the above as a common day function, it would have to be a “GEAR BOX” in a car, but this one only needs one gear, that is **zero to infinity**, in either direction; Resulting in the very simple question: “***What do you need a combustion engine for [?]***”; If you do not need an engine is a car, a truck a train, a boat, (hold on I’ll do the plane), you also do not need OIL or any other Hydro-Carbon; that’s got to be a bonus to the health of mankind.

The EMIDM will replace, the “motor” utilized in all for of “ground or seaborne” transportation, it will replace all forms of “pumping” systems, it will replace all forms of “hydro-electric-generation”; In fact, “**Where there is a pump then is an EMIDM**”.

The above relies of an extended two-dimensional linear condition about a common rotational axis; though moving forward; Changing the two-dimensional condition to a three-dimensional condition and removing the rotational condition creates a “lift”; YES, you read right “LIFT”, if there is lift and there is motion, what do you want a wing for? I did say I would cover airplane, and I’ve done just that. But why stop at “Earth” based conditional geometry; In the void of space the EMIDM does not have Earth based contradictory forces in play thus move more efficiently over any distance of space and at a speed that mankind, (today) cannot under-stand.

Chapter five: The big leap of faith:

Using different magneto combinations make ion drives; An ion drive will move at close to light speed. E.M. energy can be used to compress time; I told you that; It occurs in the helix and ferrite core. Remove the helix and core and you have a compressible E.M. bubble. A bubble that compresses time around itself; The bubble moves outside of time at a speed that mankind does not have a number for. Yes; If you were a “TREKY”, you would or may suggest that it warps time. Space and time become the moving part of the equation and not the constants as in $E=mc^2$. So, if they are variable, they can be compressed. Thus, to compress space and time within a bubble is to travel faster than light. It is really easy when your shown how.

I want you to use this symbol as a “triple differential” $\frac{d^3}{dx^3}$ to break this down, (you know the big S differential), thus S1 is the differential of location, S2 is space and S3 is time, Thus compression S3 to +/- of itself as a subset of S2 of space of +/- of itself, of location of [x,y,z]. x,y,z is now, S2 is the variable of the distance to travel, S3 is the time lapse between S2 and S2 of itself. Thus, it makes space and time (S2,3) of S1 (or) [x,y,z] (of “0” of <SSS> of any point to any point of infinity; It’s simple mathematics, nothing complex at all. Creating the E.M. bubble you’ve done, remember 440 magnets; the north on the inside and south outside, (a south bubble); now if that was “projected” forward as a negative field, the positive will want to attract as fast as possible, but as the south is always in a state of perpetual motion acceleration as the speed of the object. Compression of E.M. fields you’ve done in the hard sphere 2.2:4:1, or 1.2 and a bit more for good measure. Therefore, as 1.2 is greater 1, there is a forward acceleration of .2 of infinity. THAT IS VERY FAST. So <SSS> Each element you have done, you have compressed space (sphere), compressed time (Helix), and comprised location (ferrite core). Tell me why you think it cannot be done? I’ve shown to you at least 10 different ways of magneto compression, each producing a different fields effect. That is ten ways of moving in space within its own time frame, and I’ve shown you how to compress time within its own space. Thus, both space and time are both compressible. <SSS> stands valid ABOVE $E=mc^2$ resulting in N1 equals infinity.

Topics to come:

Telecommunication’s (50 pages summary)

Three-dimensional computational mathematics (20 pages)

Three-dimensional quantum photonic computing using IONIC array’s (SIX times the speed of light)

Particle recomposition (teleportation via travel wave tube) – Already done and proven

What-ever mankind desires, I am sure within my books, everything will be revealed, just read, learn and understand.

Not every book is a technical book, many are just for YOU,

Love and Kisses (to Humanity) Nigel.
